SiteForge ERP — Role Guides

Step-by-step guides for each role, from sign-in to end of day, with screenshots.

Role · One-line duty · Guide

Project Director · Full oversight — approve/certify everything, manage users, review audit · director.md
Financial Controller · Money — approvals within limits, AR/AP, payroll, retention, payables · controller.md
Field Superintendent · Field data — daily reports, timesheets, POs, change orders, receiving · field-superintendent.md
Tradesperson Lead · Narrow — log own time, view drawings/timeline, submit site reports · tradesperson-lead.md

How the app is organised

The left sidebar is split into **COMPANY** (whole business) and **PROJECT** (one selected project,

chosen from the selector in the top bar). The **SYSTEM** section holds Settings/Users/History.

Each guide shows which of these you can see.

Where the screenshots live

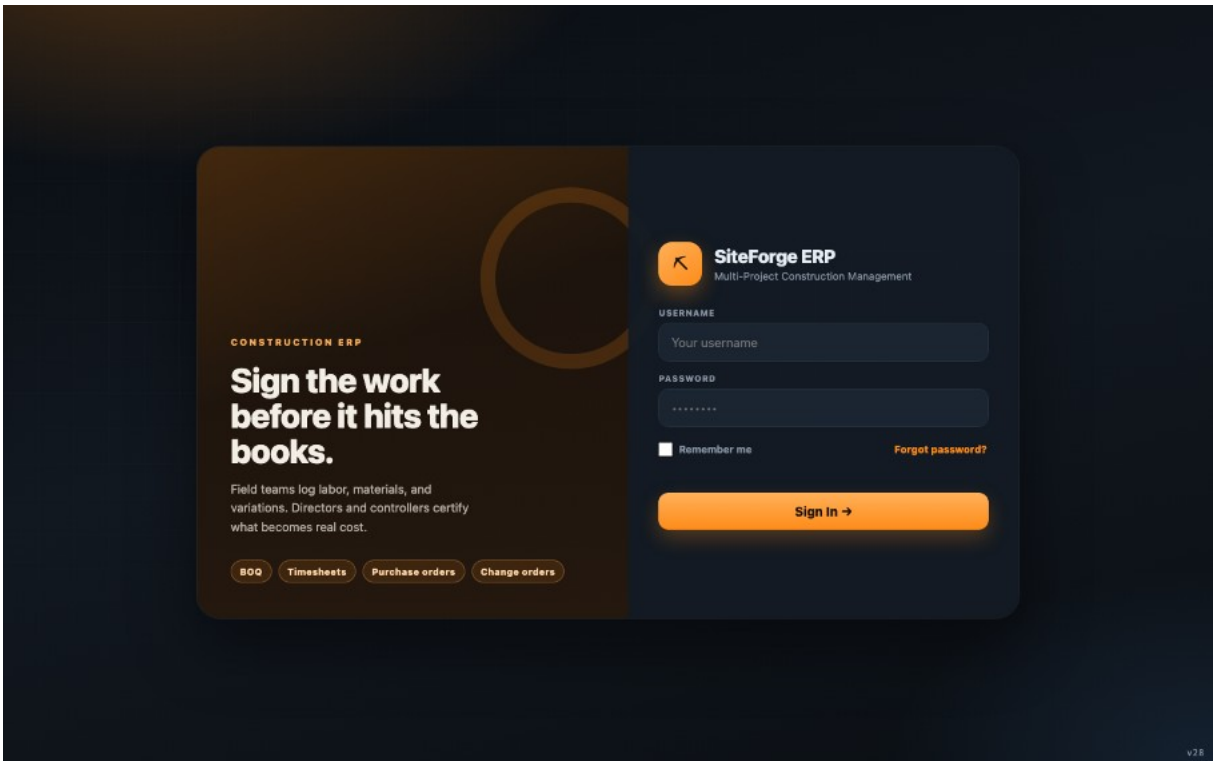

docs/screenshots/guides/<role>/ — one PNG per screen. They are captured from the real app

(signed in as that role against sample data), so what you see on screen will match these images

after your own data is loaded.

Shared basics (every role)

1. **Sign in** — username + password on the login screen.

2. **Notifications** — the 🔔 button shows compliance alerts, budget alerts and system messages.

   Dismiss individual items with ✕ or **Mark all read**.

3. **Theme/language** — ⚙ Settings → Appearance → dark/light, font, size, and English/العربية.
4. **Select a project** — the dropdown in the top bar; PROJECT views only appear after you pick one.

Approval concepts (who can decide what)

- Only **Directors** and **Controllers** can approve/reject.
- **Segregation of duties**: you cannot approve something you submitted yourself.
- **Limits of authority**: Directors are unlimited; Controllers are capped per table (default

  AED 100k) and Field Superintendents are capped (AED 25k) — an over-limit item is refused.

- **Evidence**: above a per-table threshold an approval needs an attached document first (📎).
- Every decision is written to an immutable audit log (🕓 timeline).

Continue to your role's guide for the full day-by-day walkthrough.

Project Director — Day Guide

The Project Director has **full access**: approve and certify every record, manage users, watch the

audit trail, and run the financial/management views. You are the only role that can approve anything

without a money cap, and the only one who can manage users and see the full history.

You can open: Dashboard, Projects, Expenses, Budget, Workers, Compliance, Settings, **Users**,

History, Approvals, Financial Accounts, Suppliers & Contractors, Management Exceptions, and — inside

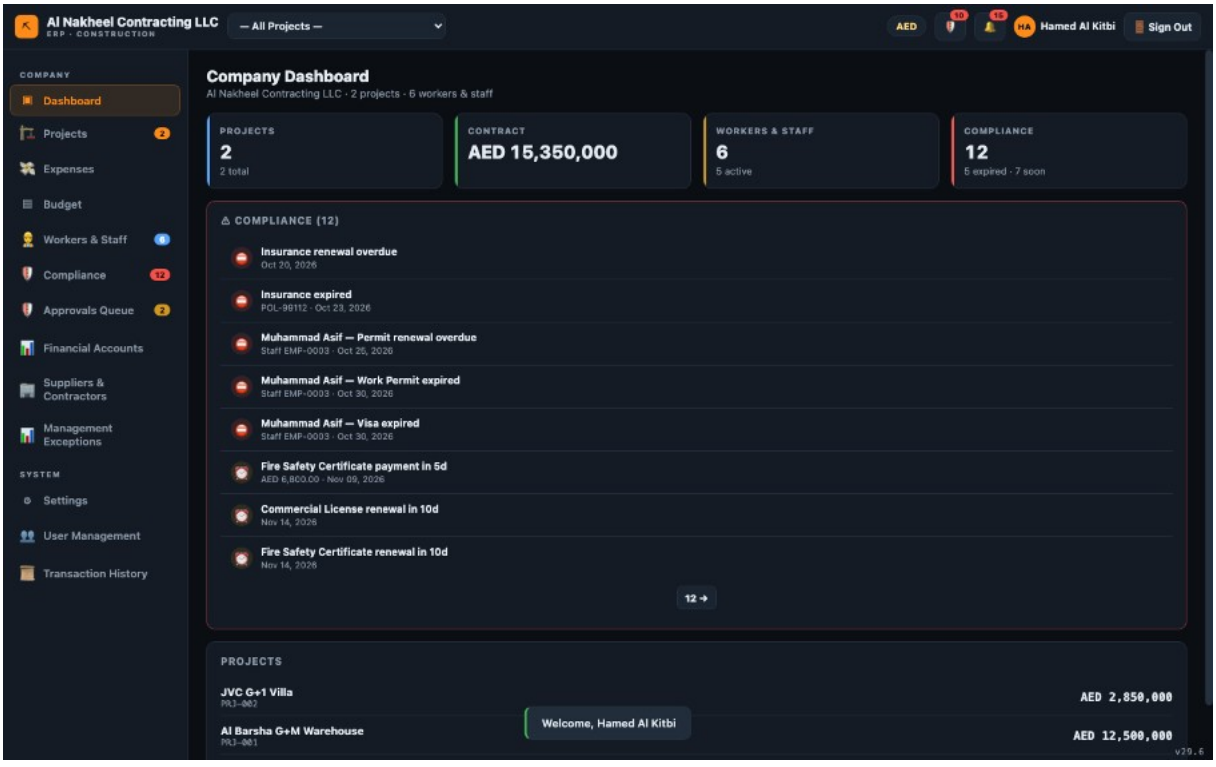

a project — Overview, BOQ, Drawings, Timeline, Materials/POs, Payments, Parties, Change Orders,

Timesheets, Payroll, Audit, Reports, Progress Billing (IPC), Site Reports, Payment Requests, Payslips,

Receiving/GRN, Retention, and Measurement & Certificates.

1. Start of day — see the whole business

5. Sign in. You land on the **Company Dashboard** (KPIs: cash, pending approvals, overruns, alerts).

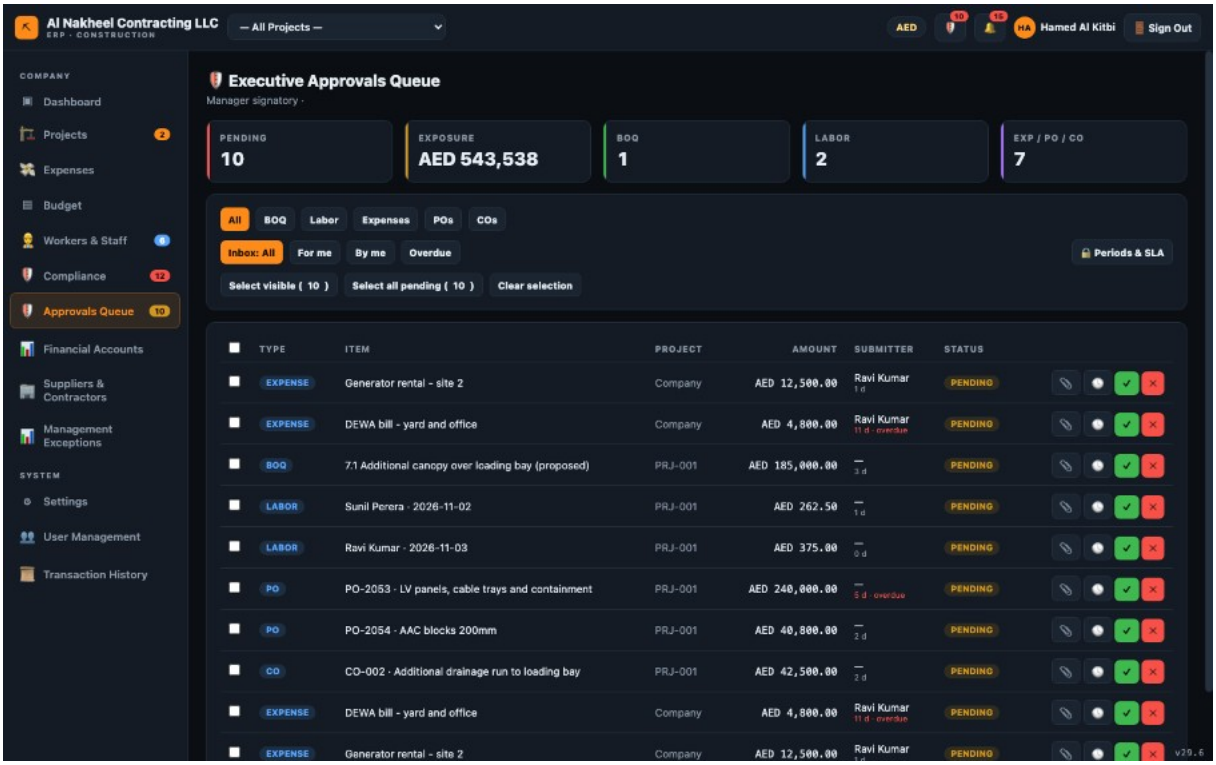

6. Open 🔔 **Notifications** and clear or act on compliance/budget alerts (dismiss with ✕ or

   Mark all read).

7. Open 🛡 **Approvals Queue** — this is your main morning task (step 2 below).

2. Clear the approvals queue

8. Open **Approvals Queue**. Use the tabs to triage: **Inbox: All / For me / By me / Overdue**.

9. For each pending item:

   - 🕓 opens the decision history; 📎 opens evidence attachments.

   - If the amount needs evidence and none is attached, the system refuses — attach the document

     first (📎 → Add evidence).

   - ✓ **Approve** or ✕ **Reject** (rejection requires a reason).

   - You cannot approve something you submitted yourself (segregation of duties).

10. Repeat until the queue is empty.

3. Financial health

11. Open **Financial Accounts** → Receivables, Payables, Balance Sheet, Profit & Loss.

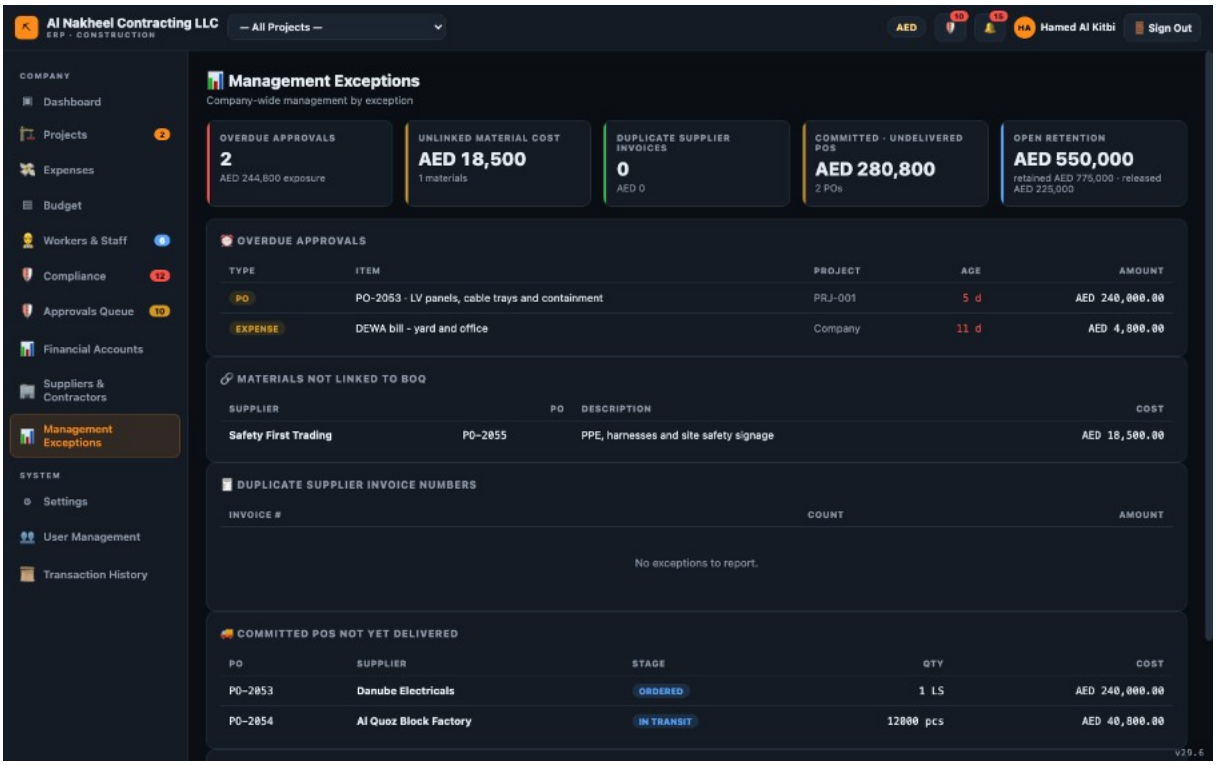

12. Check the **Balance Sheet** — it shows retained/released retention netted, and must show the

green "Balanced" badge (assets = liabilities + equity).

13. Open **Management Exceptions** for the red flags: overdue approvals, unlinked costs, duplicate

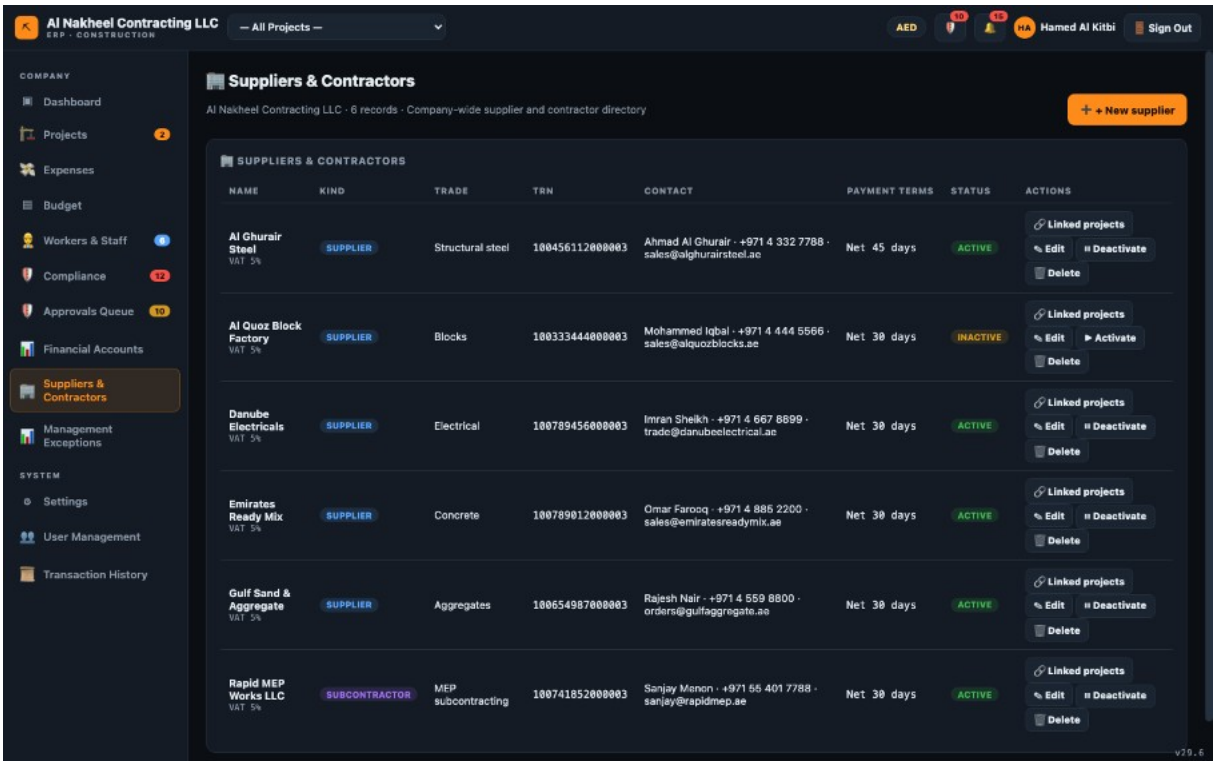

supplier invoices, committed-but-undelivered POs, open retention.

4. Suppliers, budget, people

14. **Suppliers & Contractors** — maintain the company-wide vendor master and link suppliers to

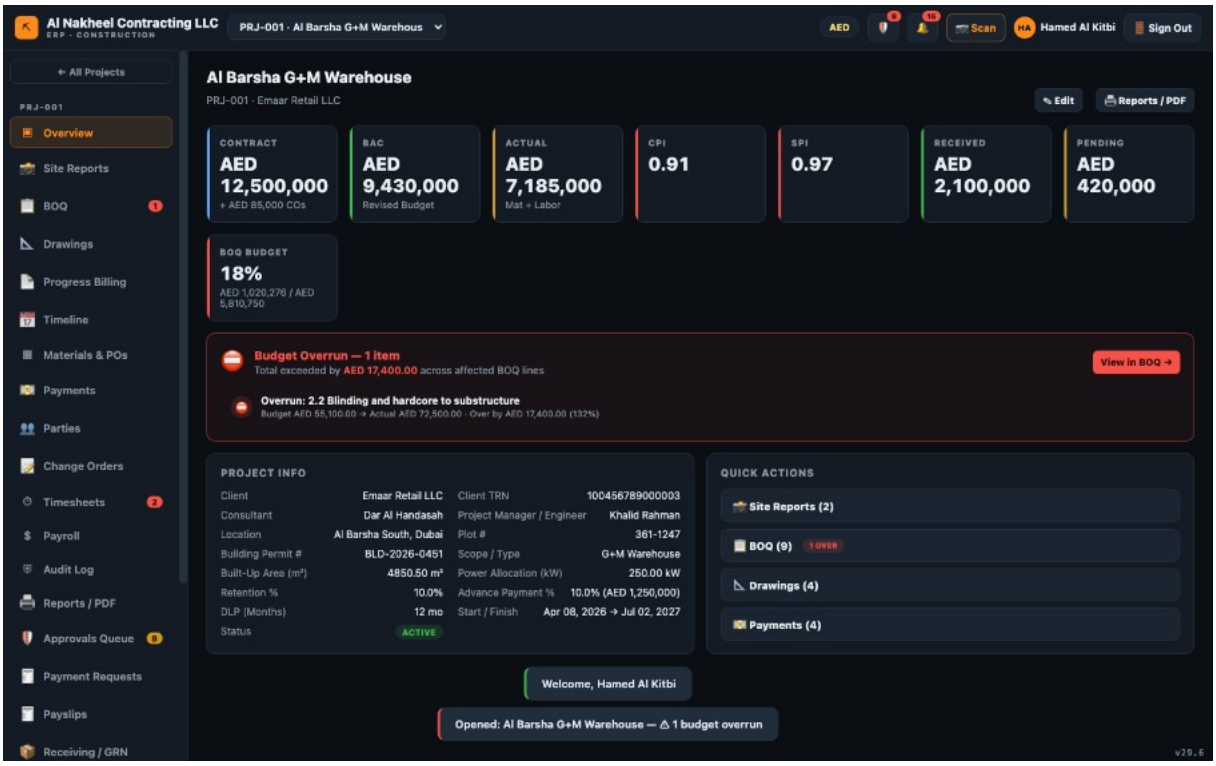

projects (bank/TRN/terms live here).

15. **Company Budget** and **Expenses** — review spend vs budget and approve expenses.
16. **Workers & Staff** — maintain the register (salary, loan balance, permits).
17. **Compliance** — check expiring permits/visas and act on overdue items.

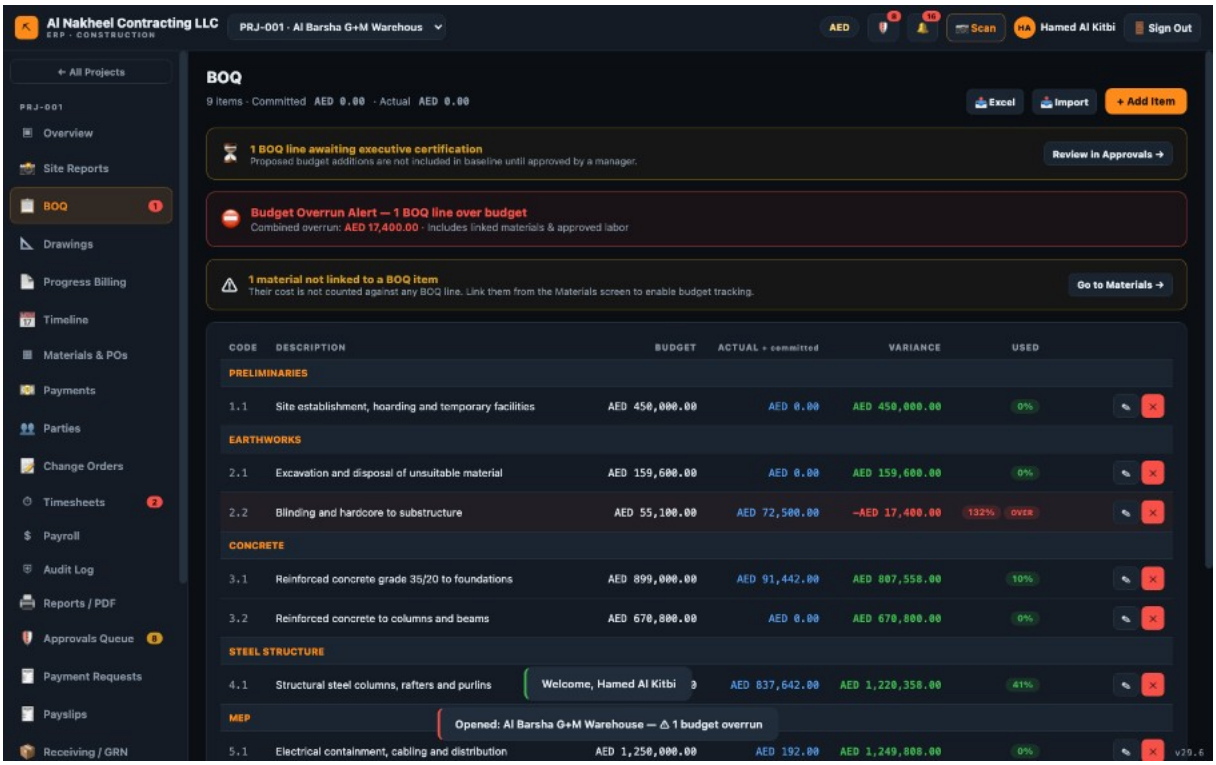

5. Work a project (pick one from the top bar)

18. Open a project → **Overview** for the project KPIs.

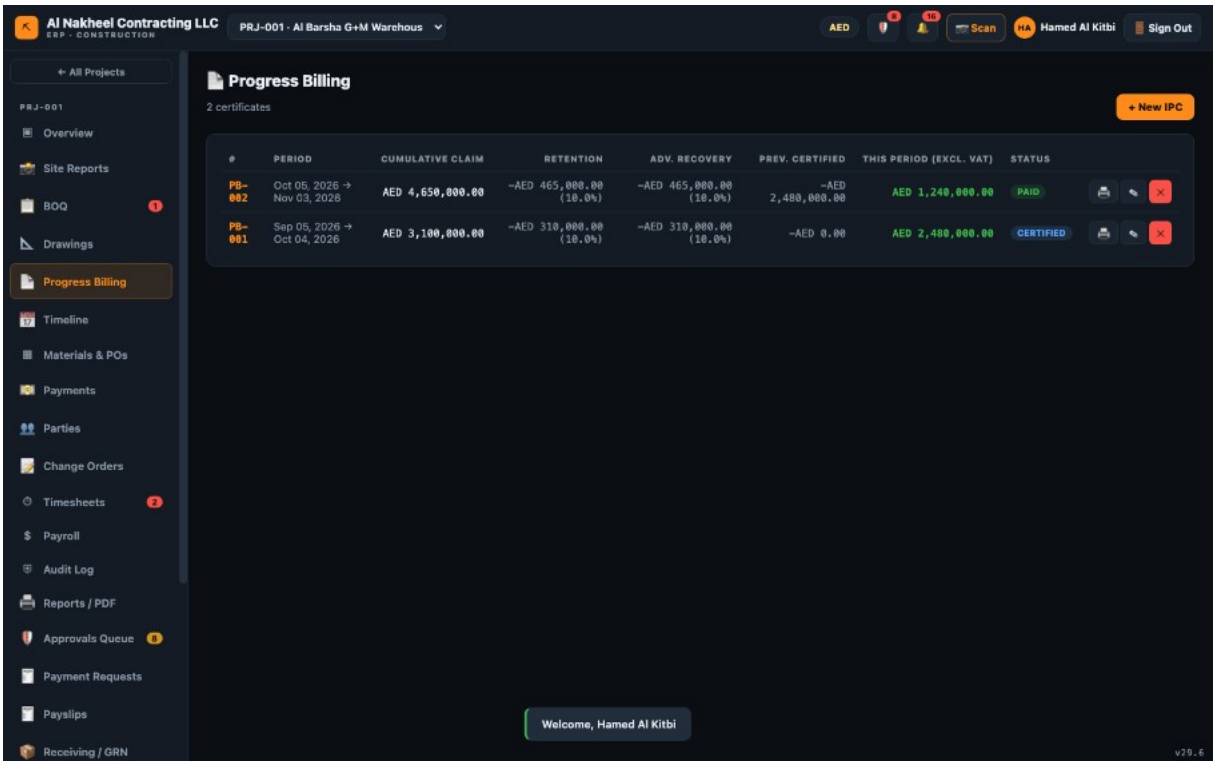

19. **BOQ** — review budget vs **actual** vs **committed** (POs still Ordered/In Transit show as

committed, not actual).

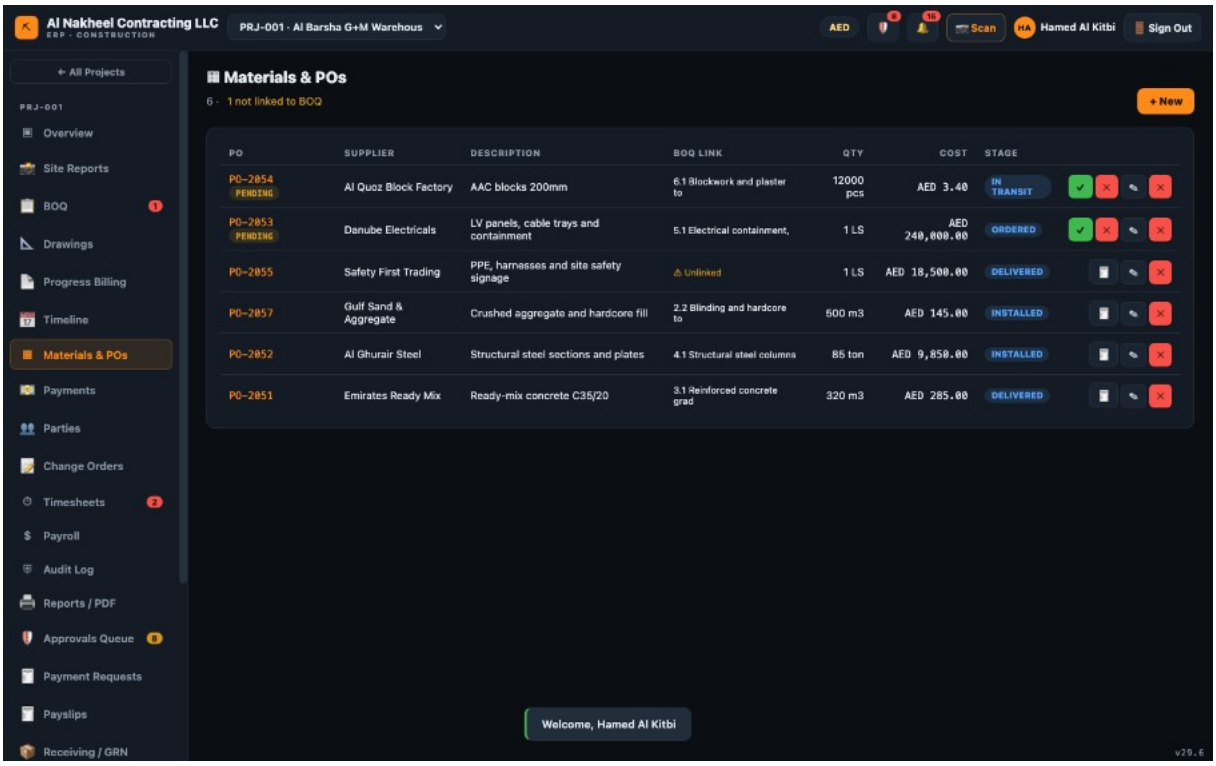

20. **Progress Billing (IPC)** — create/certify IPCs. Certifying syncs the receivable into Payments.

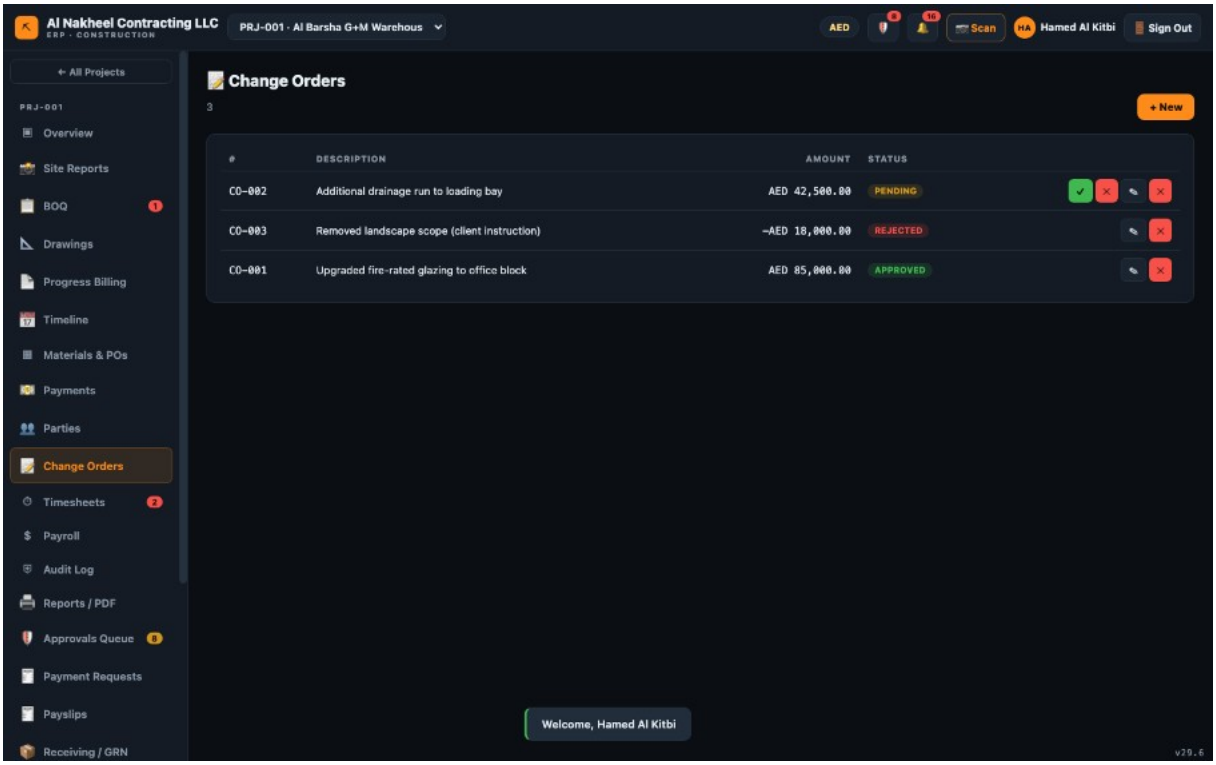

21. **Materials & POs** — approve POs; on a delivered/approved PO press to convert it into a

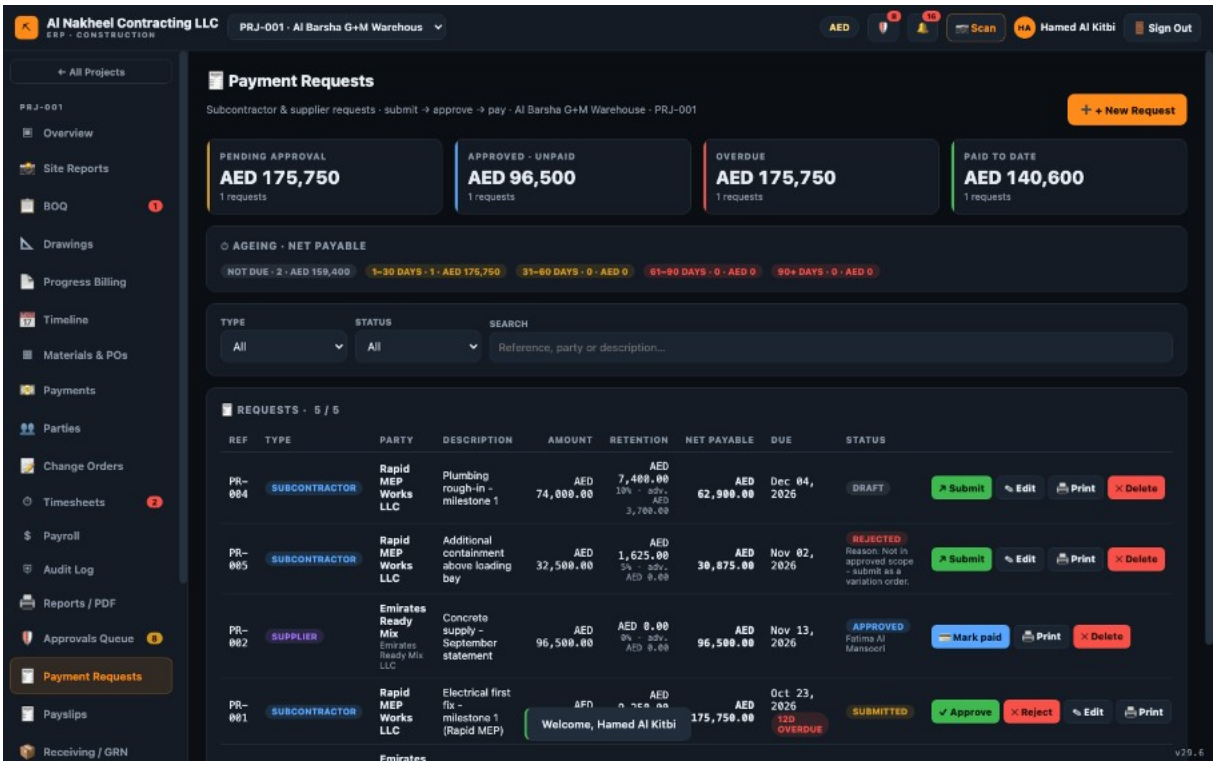

supplier payable invoice (5% VAT, 30-day terms). A goods receipt is required first (3-way match).

22. **Change Orders** — approve them; an approved CO auto-creates a **Variations** BOQ line.

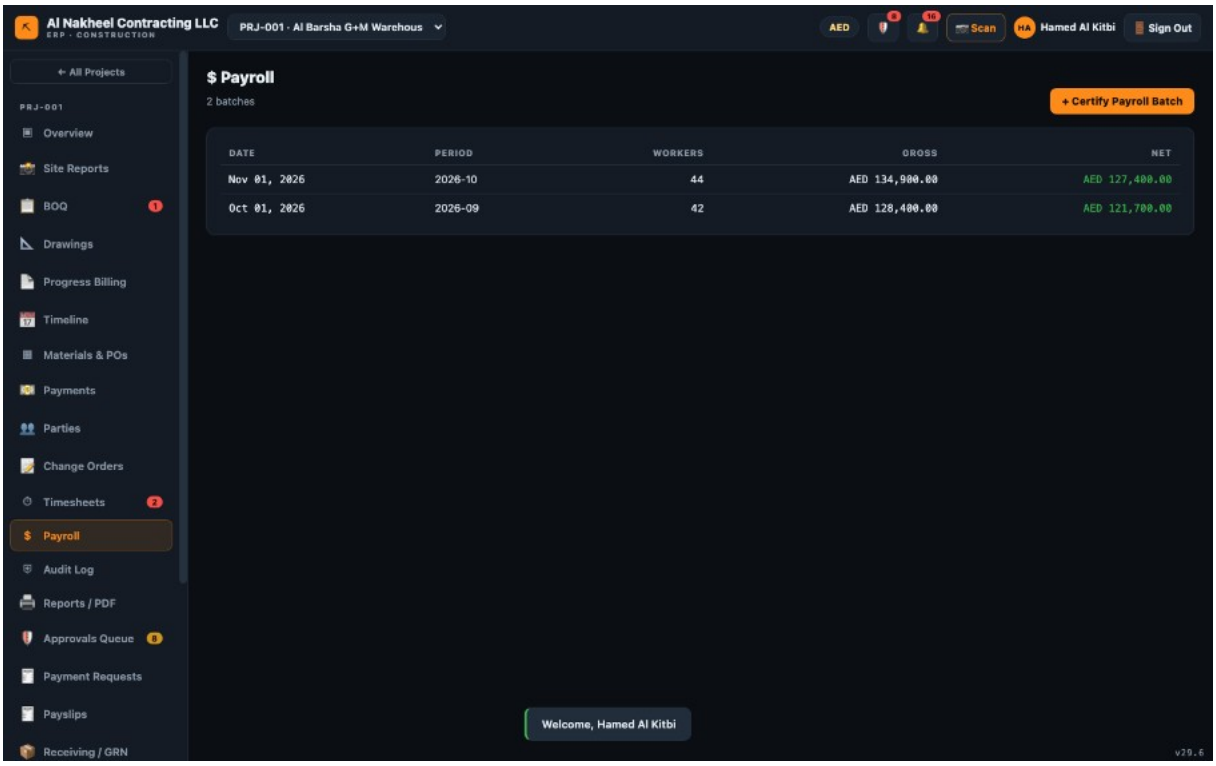

23. **Payment Requests** — approve subcontractor/supplier claims (submit → approve → mark paid).

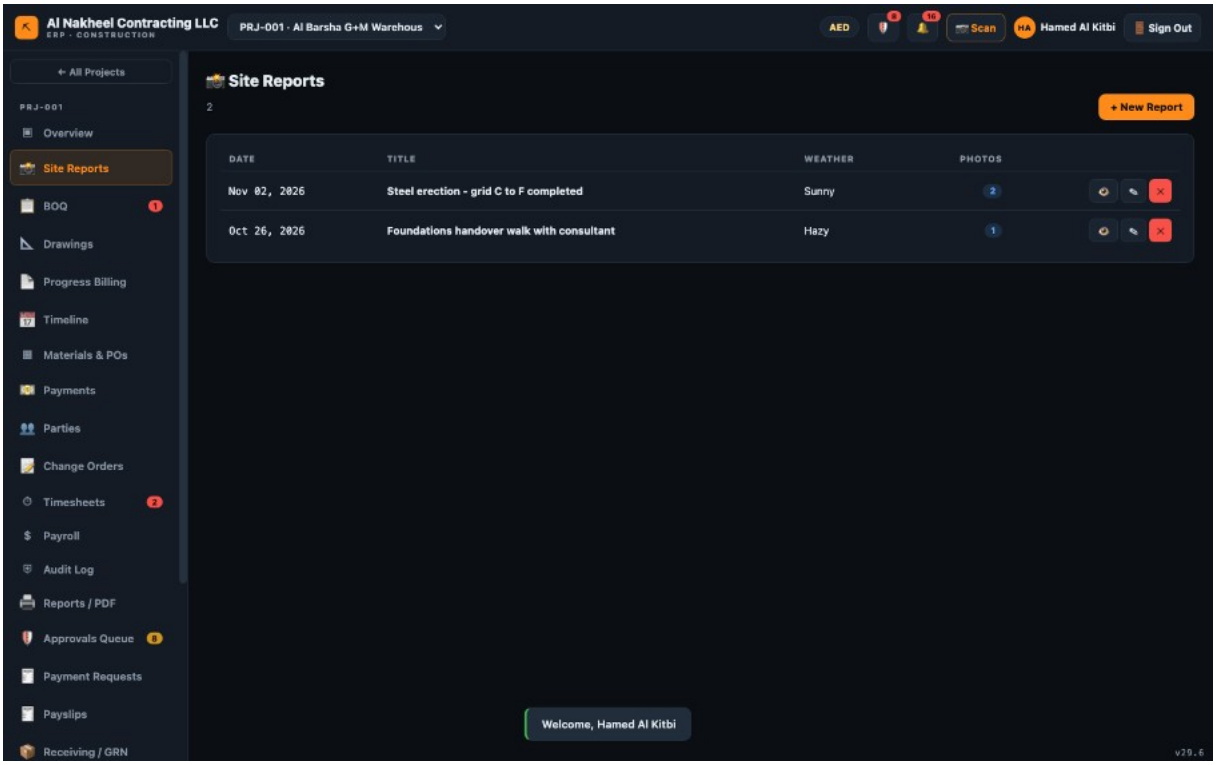

6. Field & labour

24. **Timesheets** — review submitted labour; approve.
25. **Payroll** — run the **Unified Monthly Payroll** (basic + 1.5× approved OT − loan) which updates

each worker's loan balance and posts the salaries expense.

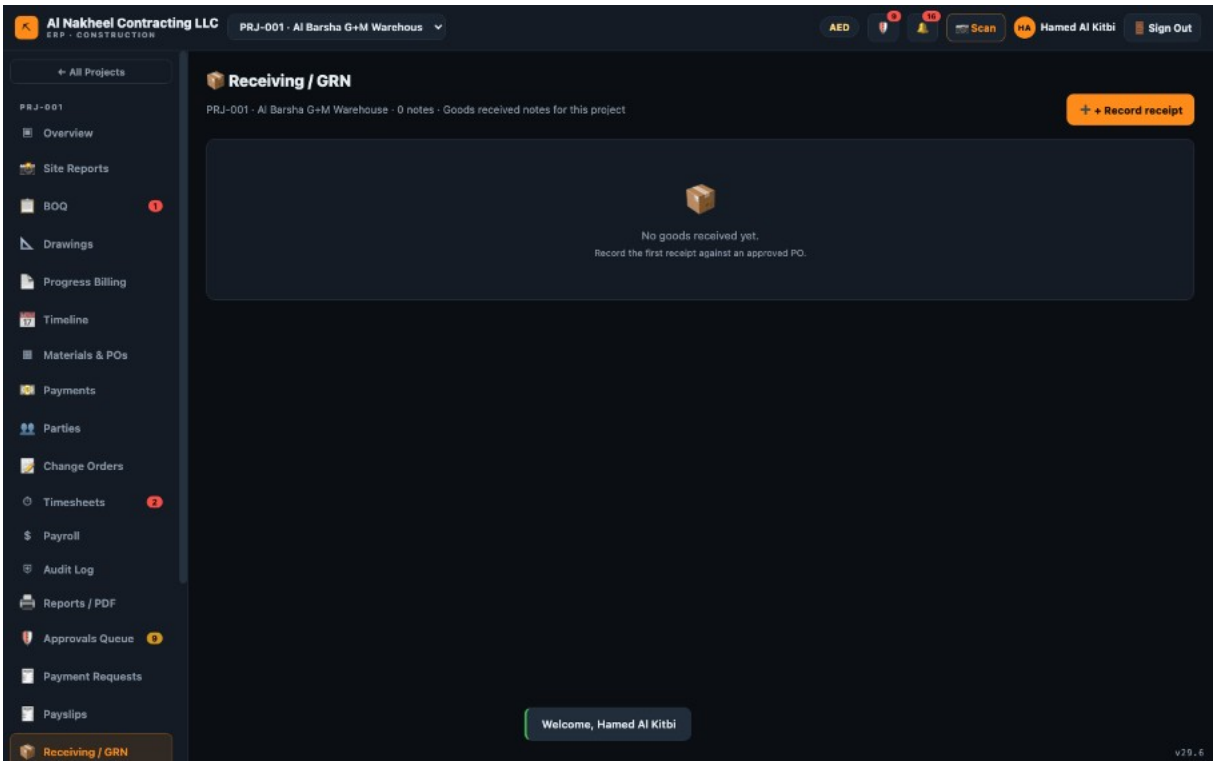

26. **Payslips** — generate per-worker slips and print/PDF.
27. **Site Reports** — review daily reports with photo evidence.

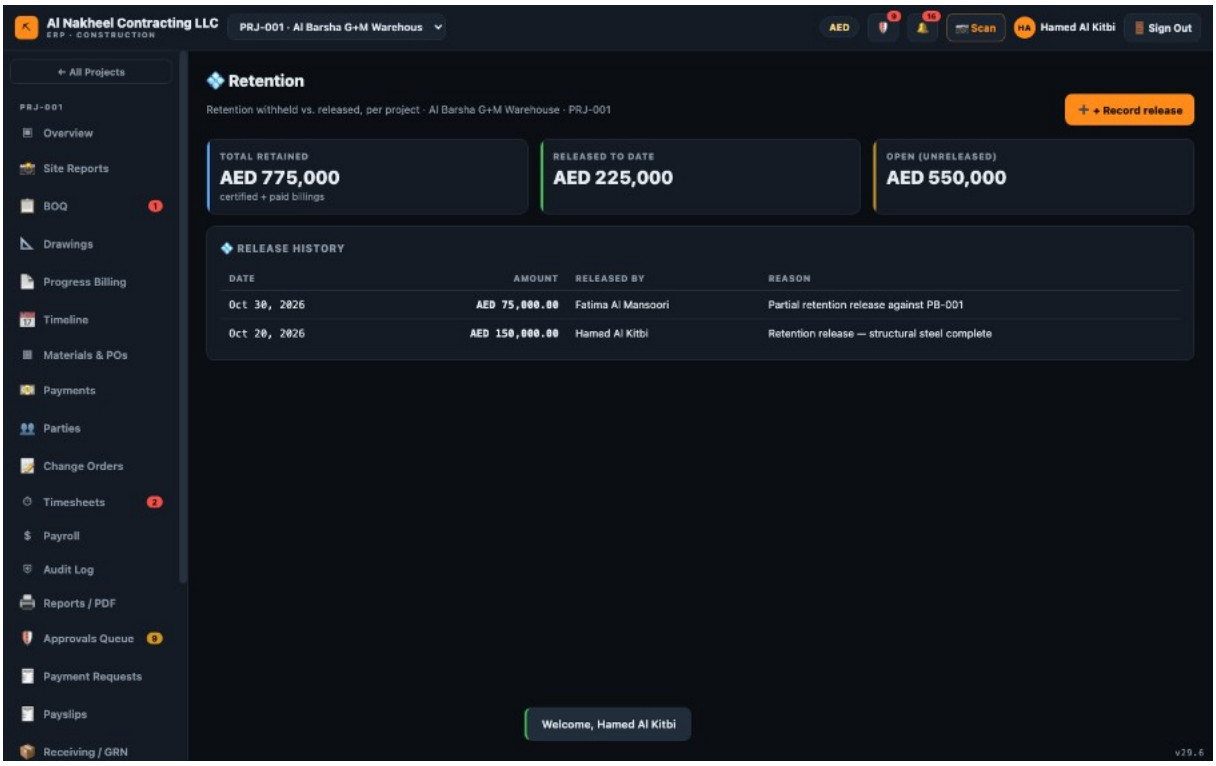

7. Receiving, retention, certificates

28. **Receiving / GRN** — record goods received against POs (this unblocks PO billing and payment).

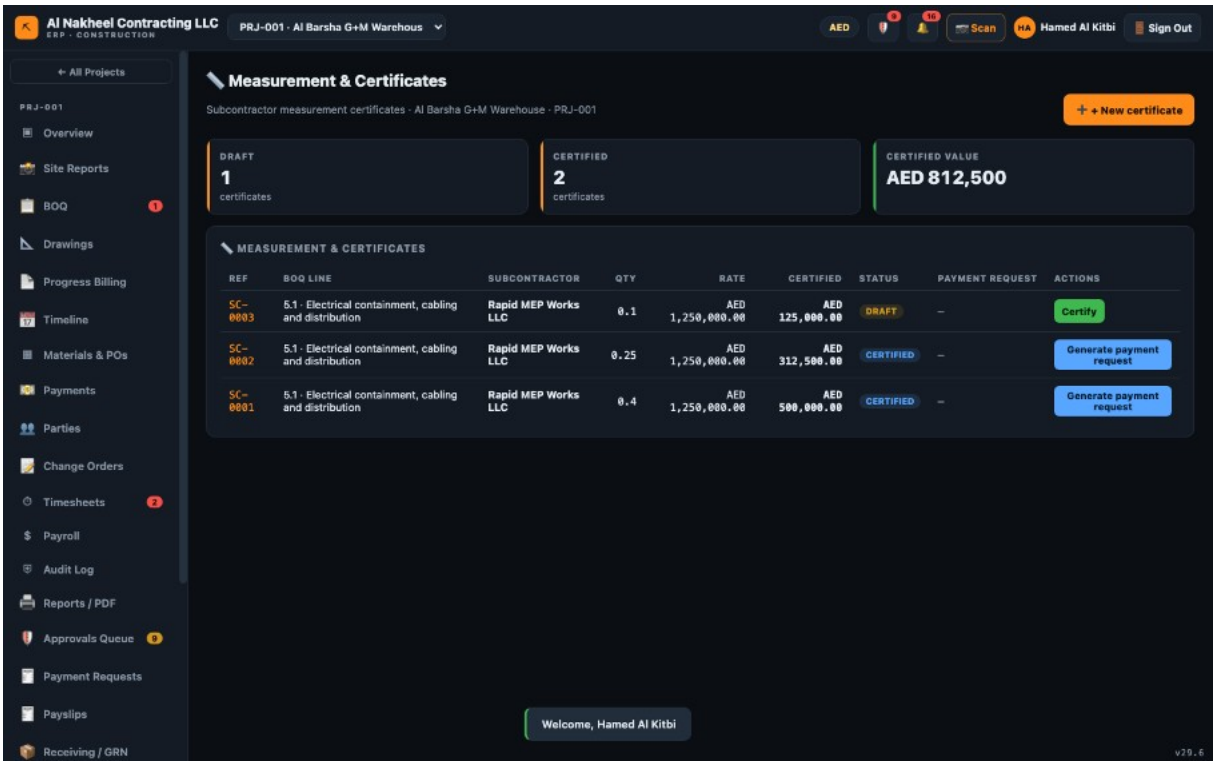

29. **Retention** — release retention per project (amount ≤ open, reason required).

30. **Measurement & Certificates** — measure BOQ quantities, certify, and generate a subcontractor

payment request.

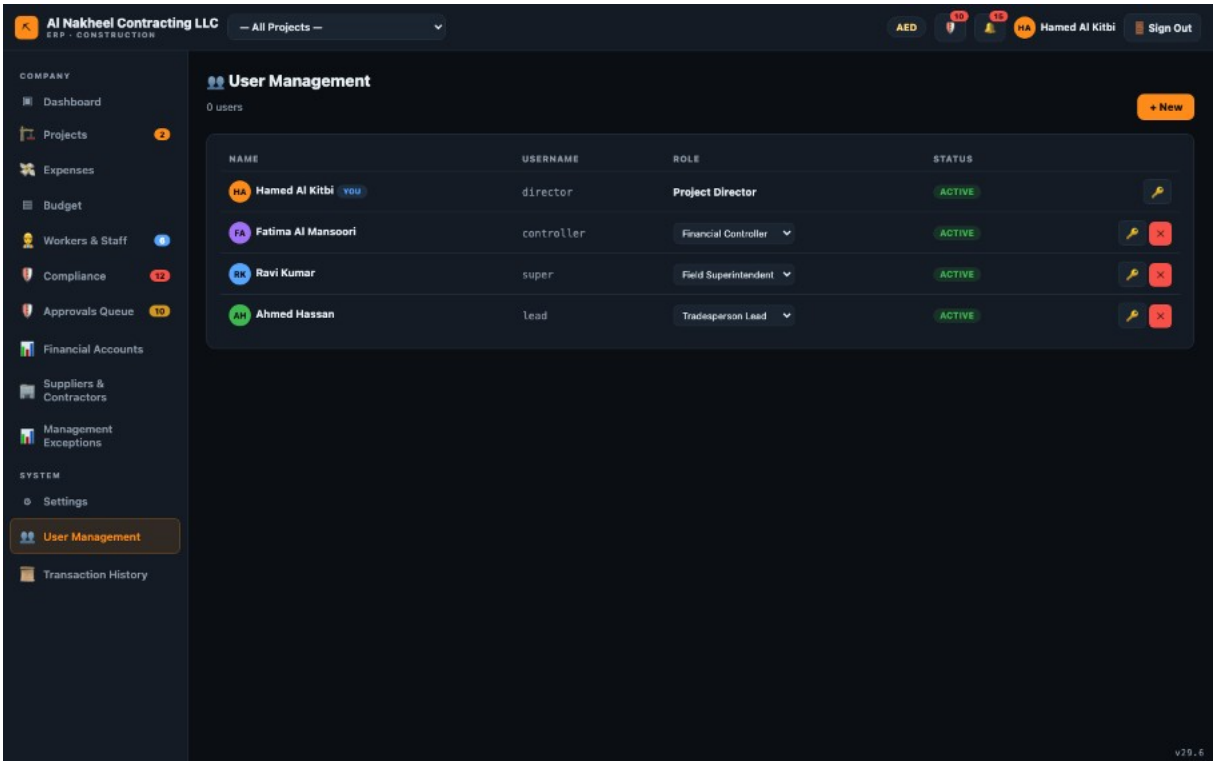

8. Month-end & governance

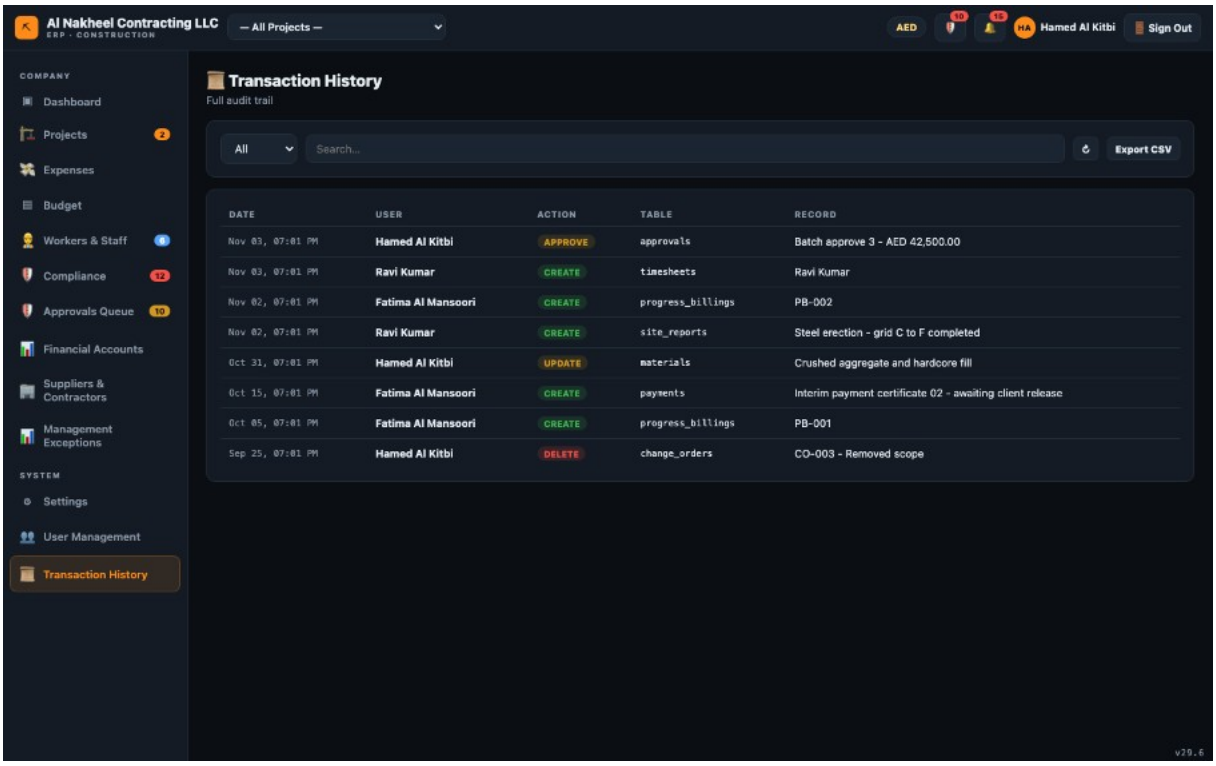

31. Open 🔒 **Periods & SLA** (in the Approvals header) → close the month to lock writes, set the

approval SLA in days.

32. **Users** — add/disable users, assign roles, reset passwords.

33. **History** — review the full audit trail (who did what, when).

34. **Settings** — branding (logo), language, theme.

9. End of day

- Confirm the approvals queue is empty (or items are delegated/flagged).
- Check the Balance Sheet "Balanced" badge and the Management Exceptions screen for anything red.
- If it's month-end, close the period; if it's payroll day, certify the payroll run.

Financial Controller — Day Guide

The Financial Controller owns the **money**: approvals (within your limit), receivables/payables,

payroll, retention and payment requests. You can approve and reject, but your limit of authority is

capped per table (default AED 100,000) — anything larger is refused unless a Director approves it.

You cannot manage users or view the full history.

You can open: Dashboard, Projects, Expenses, Budget, Workers, Compliance, Settings, Approvals,

Financial Accounts, Suppliers & Contractors, Management Exceptions, and — inside a project — Overview,

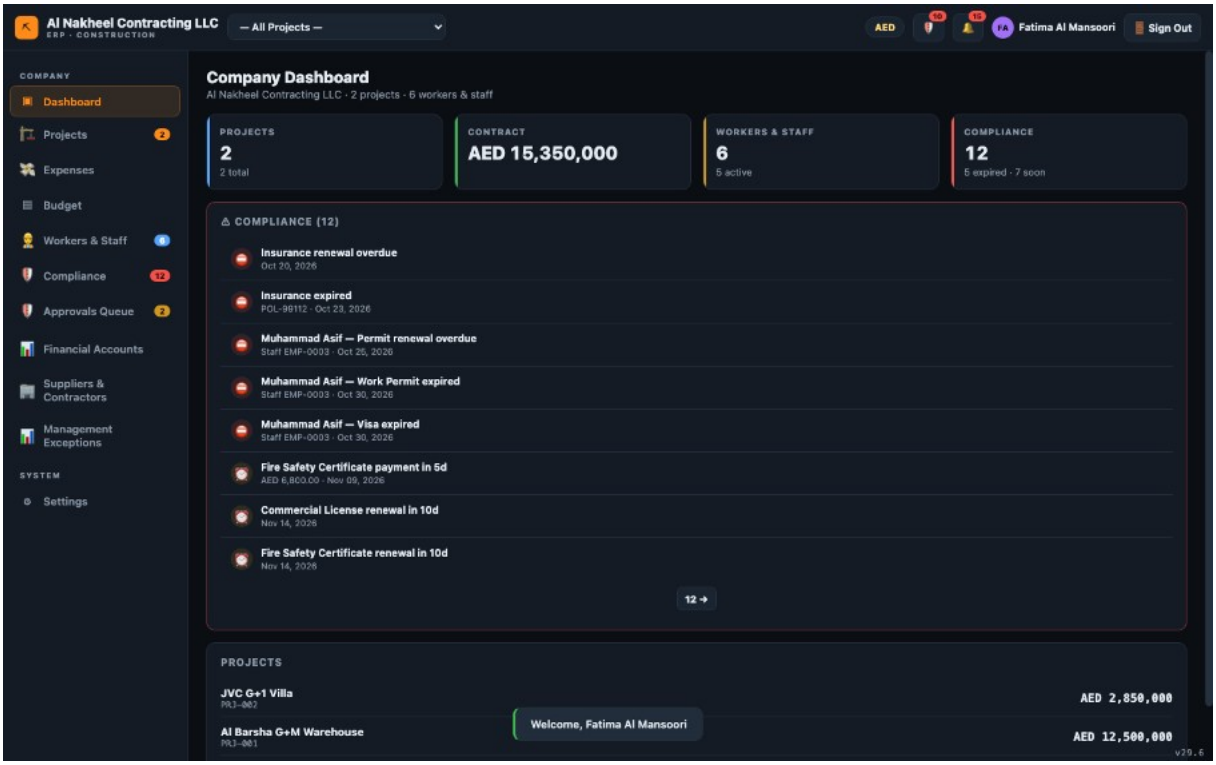

BOQ, Drawings, Timeline, Materials/POs, Payments, Parties, Change Orders, Timesheets, Payroll, Audit,

Reports, Progress Billing, Site Reports, Payment Requests, Payslips, Receiving/GRN, Retention, and

Measurement & Certificates. *(No Users, no History.)*

1. Start of day

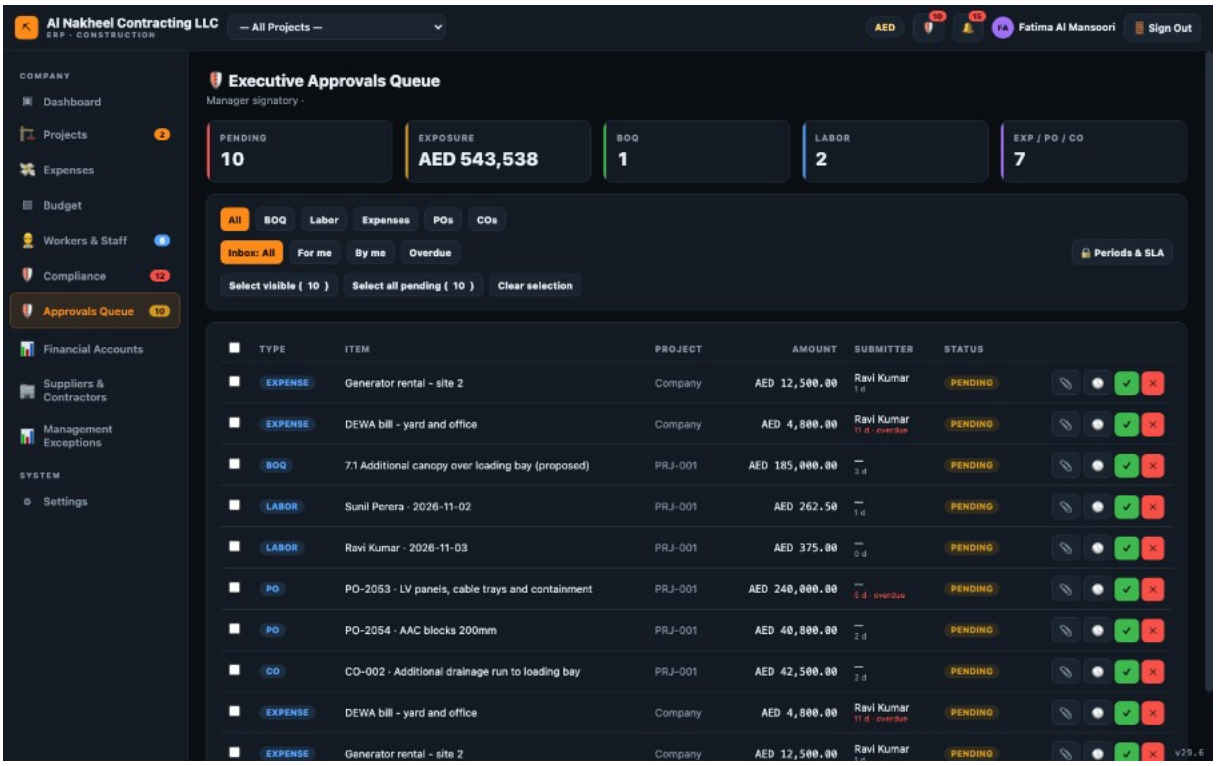

35. Sign in → **Company Dashboard**.

36. Clear the 🔔 notifications (dismiss compliance/budget alerts or Mark all read).

2. Approvals (within your limit)

37. Open 🛡 **Approvals Queue** → **For me / Overdue** tabs.

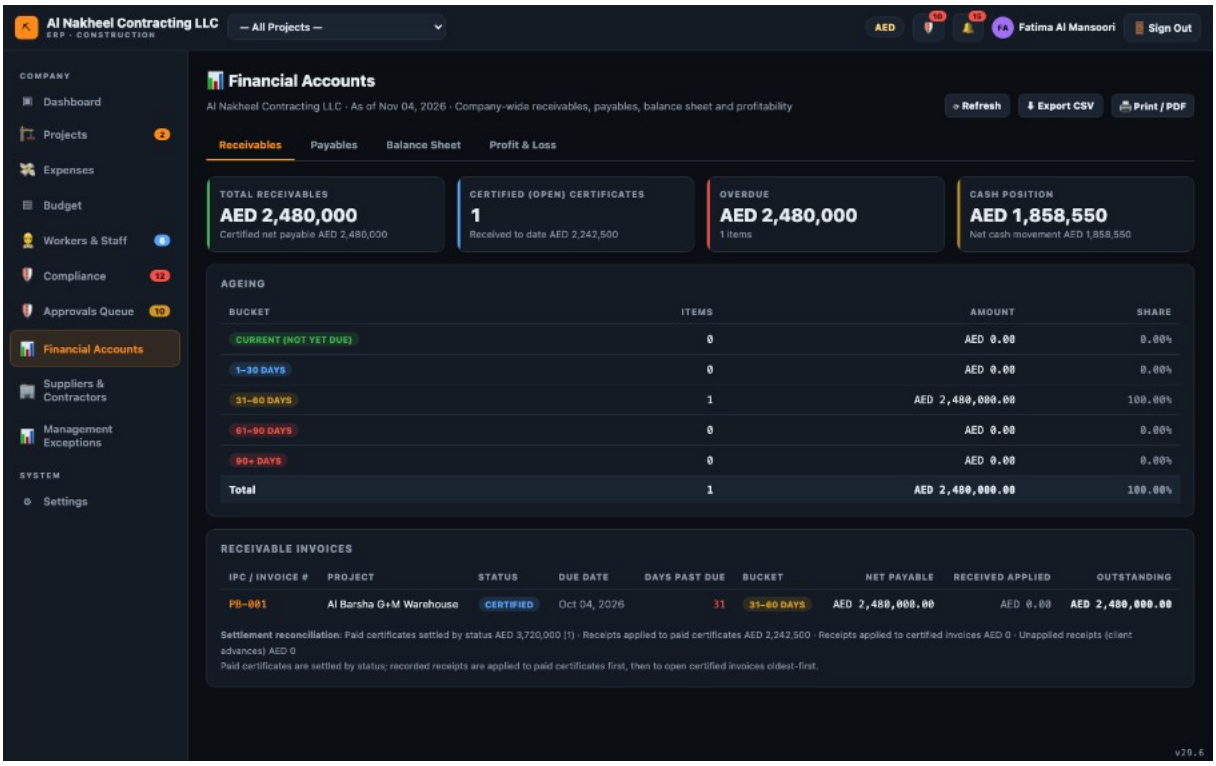

38. Review each item (🕓 history, 📎 evidence). Attach evidence when the amount requires it.
39. ✓ **Approve** or ✕ **Reject** (with reason). An item **above your limit is refused** — a Director

must sign it. You also cannot approve your own submission.

3. Financial accounts (your core screen)

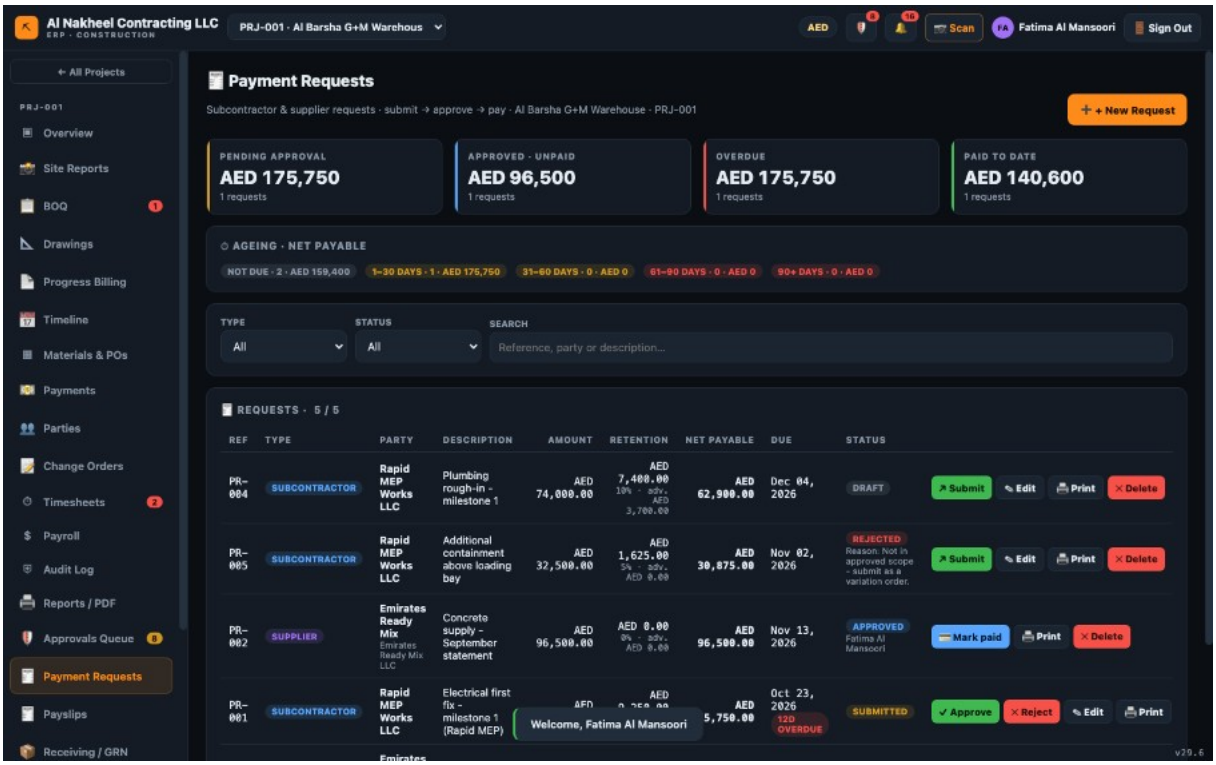

40. Open **Financial Accounts**: Receivables, Payables, Balance Sheet, Profit & Loss.

41. Enter/verify **opening balances** (Balance Sheet → Opening balances).
42. Confirm the balance sheet shows the green **Balanced** badge.

4. Payables & cash

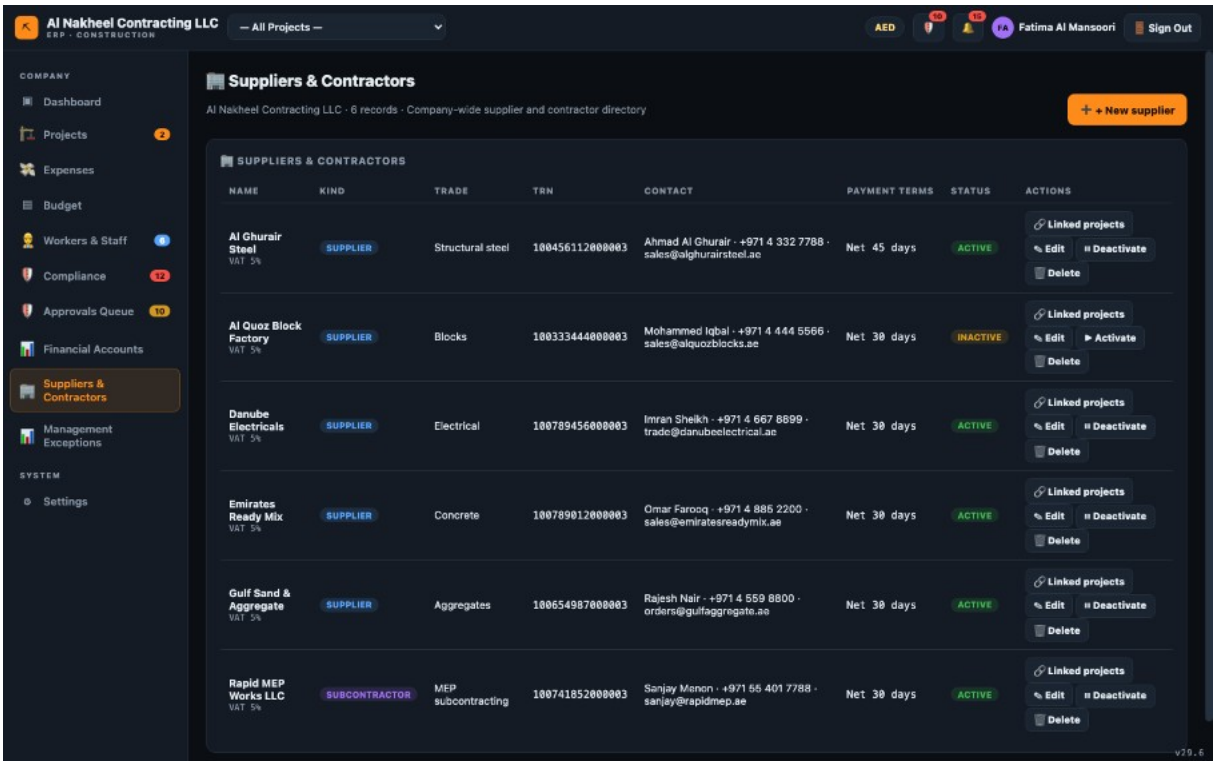

43. **Payment Requests** — approve subcontractor/supplier claims within your limit, then mark them paid.

44. **Payments** — record receipts/payments; marking a supplier invoice **paid** is blocked until its

PO has a matching goods receipt.

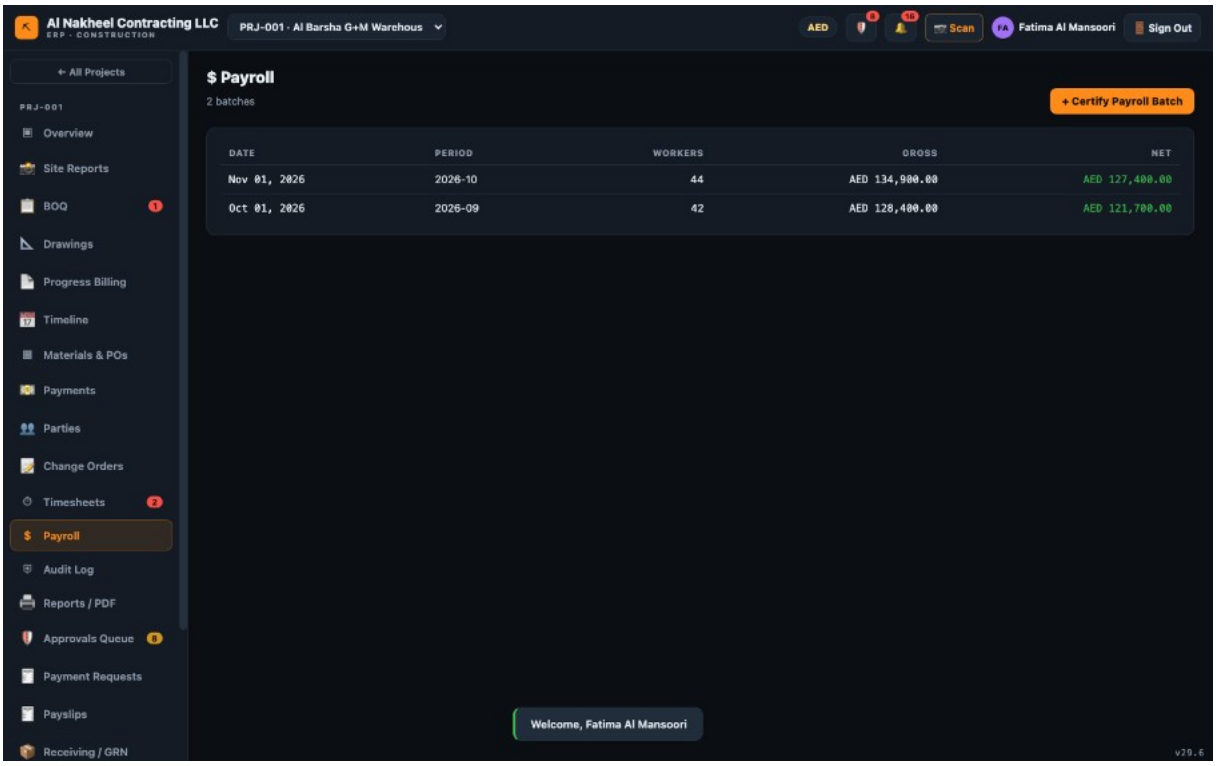

45. **Suppliers & Contractors** — maintain the vendor master (bank/TRN/terms).

5. Payroll & people

46. **Payroll** — run the unified monthly payroll (basic + 1.5× approved OT − loan), which updates

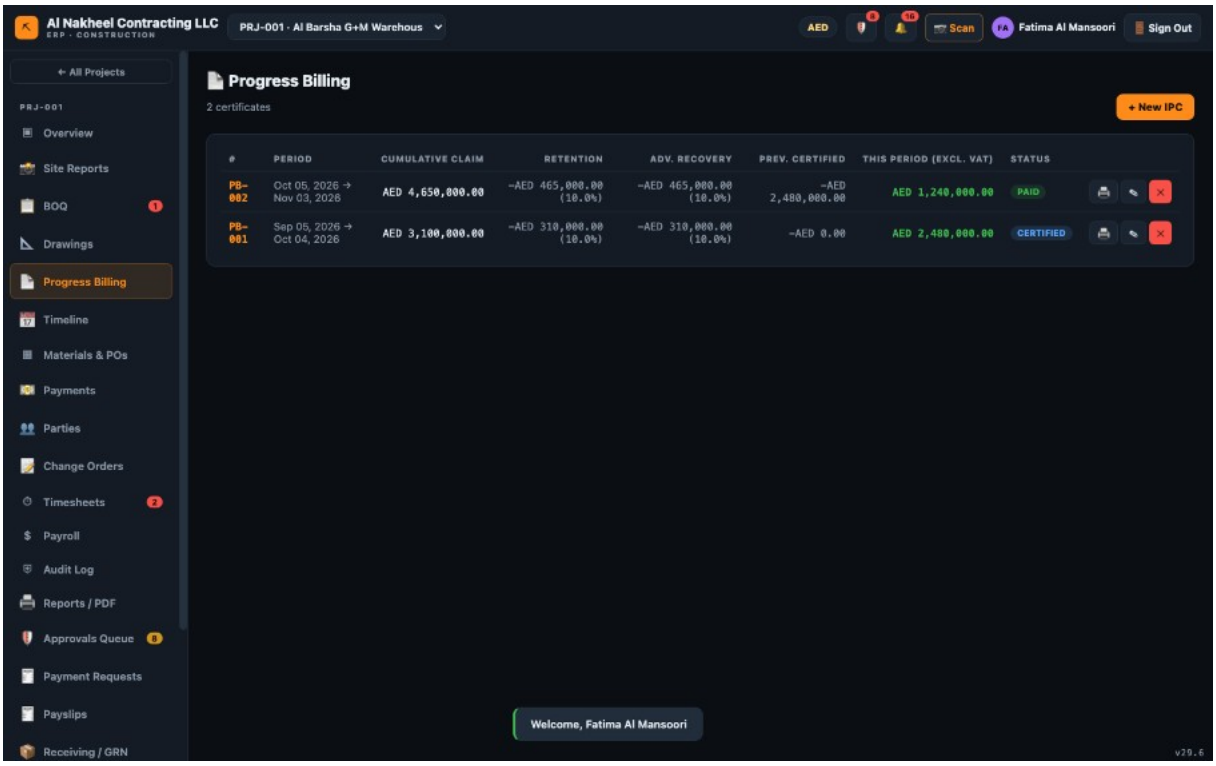

worker loan balances and posts the salaries expense.

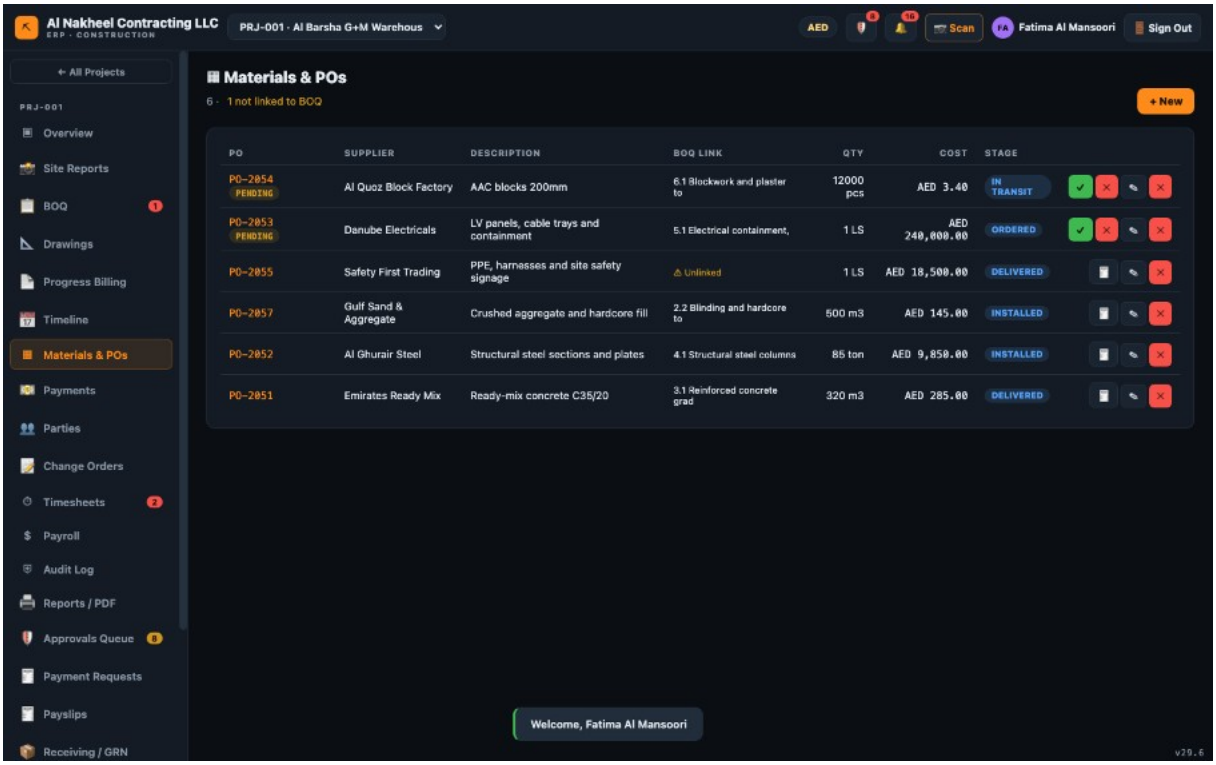

47. **Payslips** — generate and print per-worker slips.
48. **Workers & Staff** — review the register (salary, loans).
49. **Expenses** and **Company Budget** — approve and review spend vs budget.

6. Project close-out

50. **Progress Billing (IPC)** — certify IPCs (this syncs the receivable into Payments).

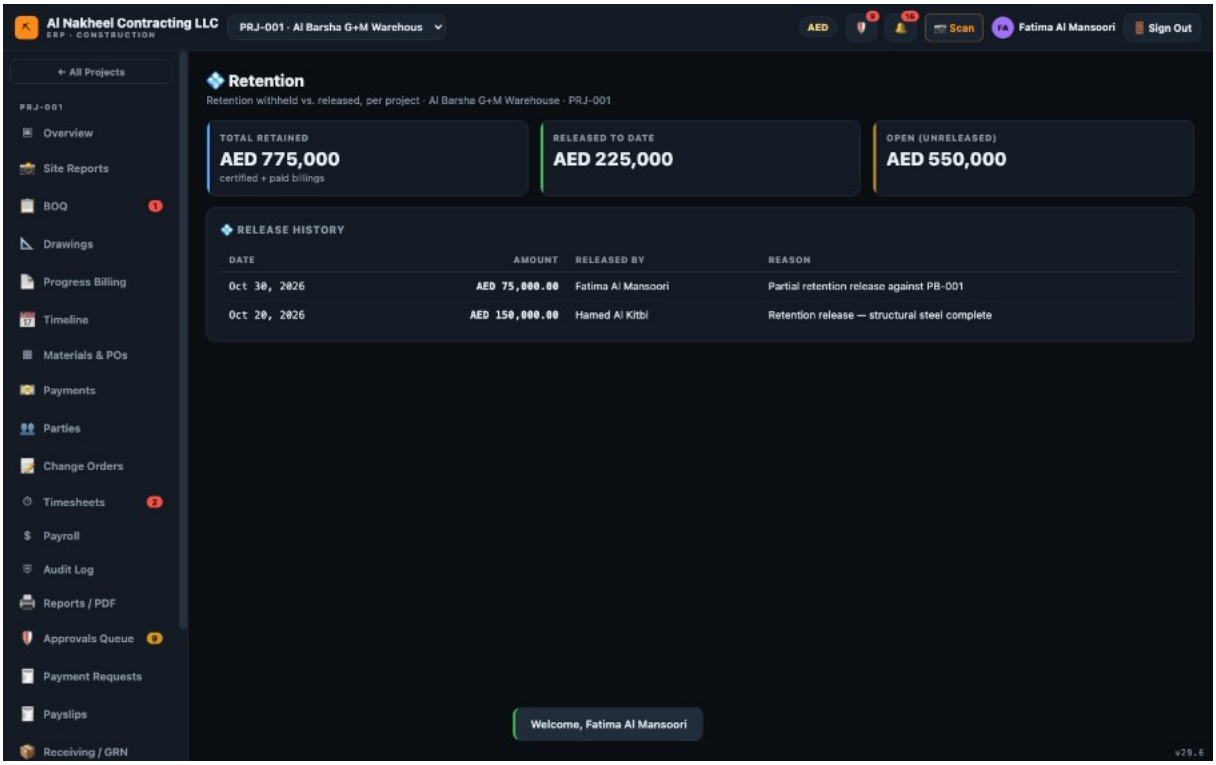

51. **Materials & POs** — approve POs; convert delivered POs to supplier bills (, requires GRN).

52. **Receiving / GRN** — record goods received (unblocks billing/payment).

53. **Retention** — release retention per project (≤ open, reason required).

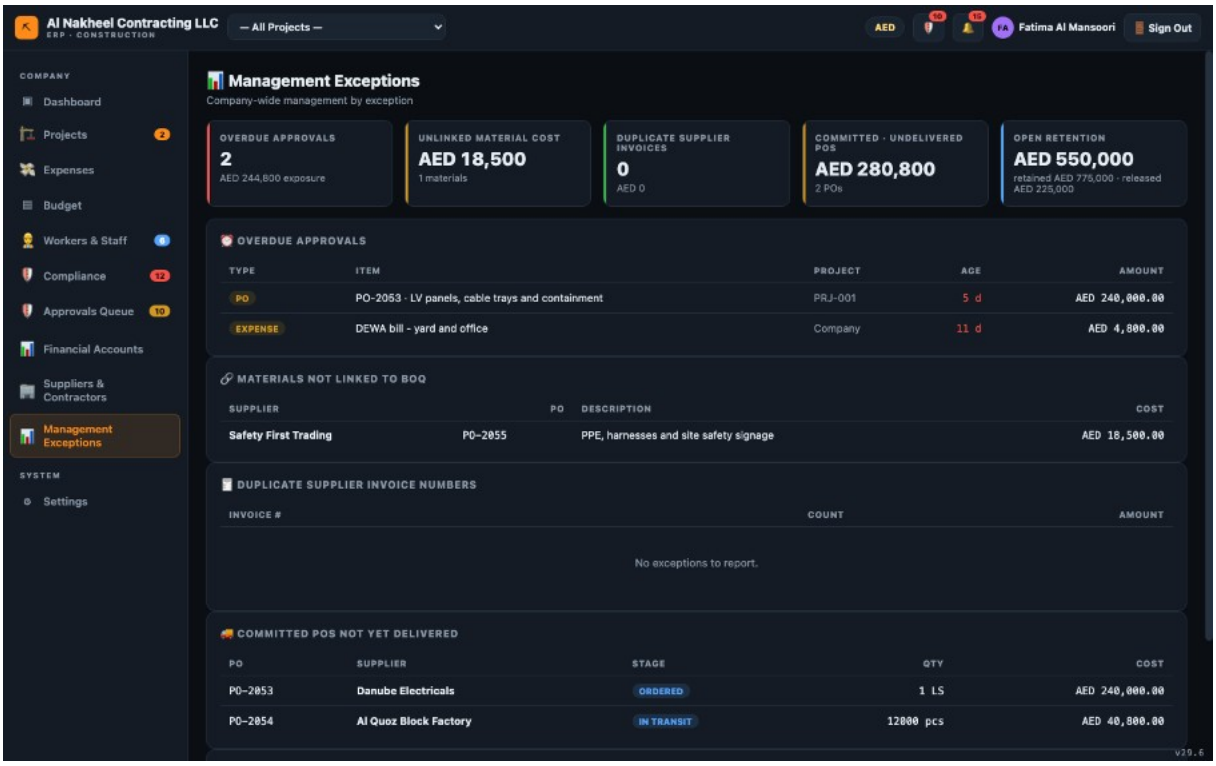

54. **Measurement & Certificates** — certify measured quantities and generate subcontractor payment

requests.

7. Oversight

55. **Management Exceptions** — review red flags (duplicate invoices, unlinked costs, overdue approvals,

committed-not-delivered POs, open retention).

8. End of day

- Confirm approvals cleared (or escalated to a Director for over-limit items).
- Reconcile the balance sheet; note any open retention to release.
- At month-end, close the period from 🔒 **Periods & SLA** (if you have been granted director rights

to do so — otherwise ask the Director).

Field Superintendent — Day Guide

The Field Superintendent records what happens on site and **submits** it for approval. You do the

field data entry — daily reports, timesheets, purchase orders, change orders, payment requests and

goods receipts — but you do **not** approve/certify (managers do). You have no access to the financial

accounts, payroll, retention, payslips or the approvals queue.

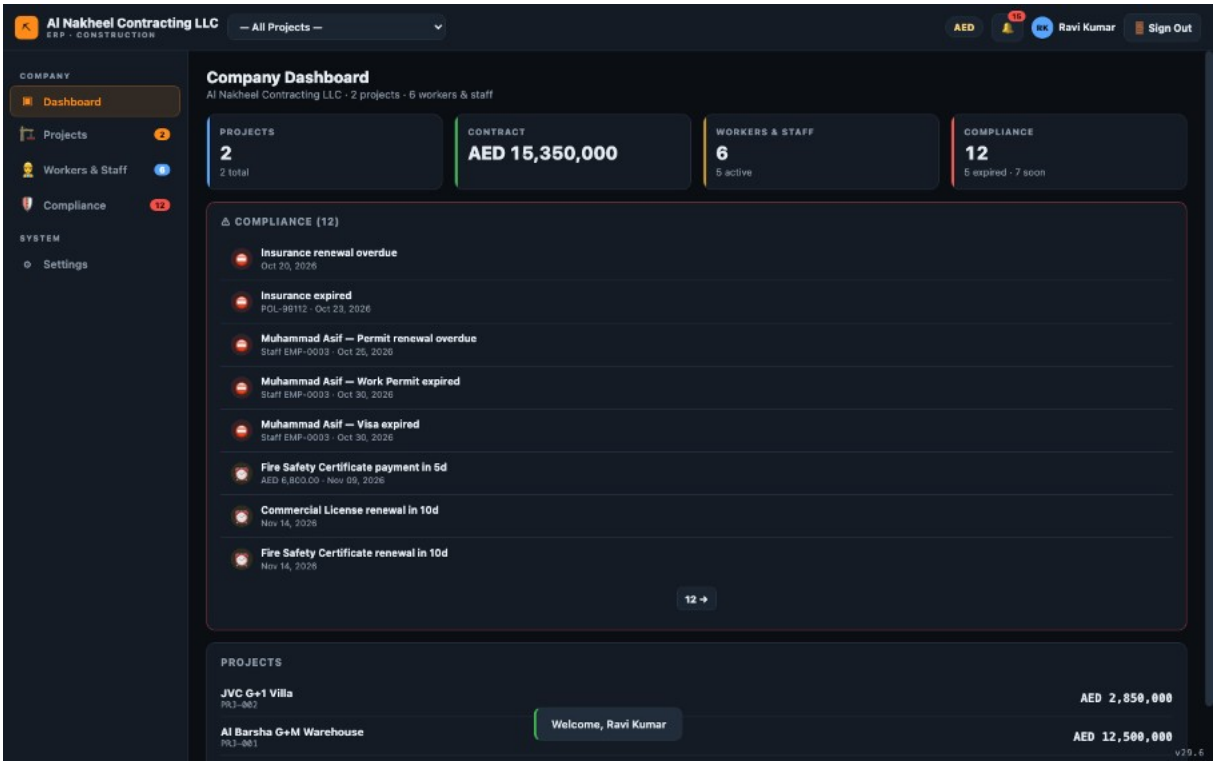

You can open: Dashboard, Projects, Workers, Compliance, Settings, and — inside a project — Overview,

BOQ, Drawings, Timeline, Materials/POs, Payments, Parties, Change Orders, Timesheets, Audit, Reports,

Site Reports, Payment Requests, and Receiving/GRN.

1. Start of day

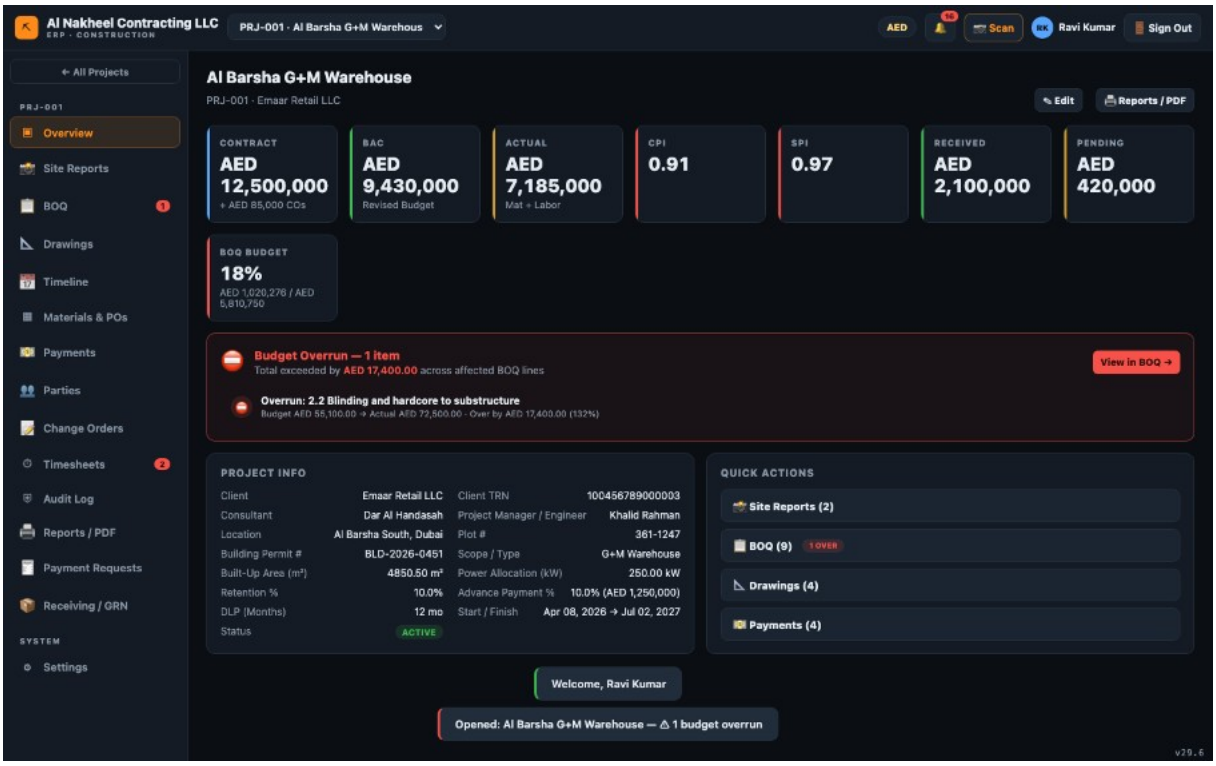

56. Sign in → **Company Dashboard** (alerts for permits/visas/compliance that need your attention).

57. Clear the 🔔 notifications; act on compliance alerts (expiring permits, documents).

2. Pick your project

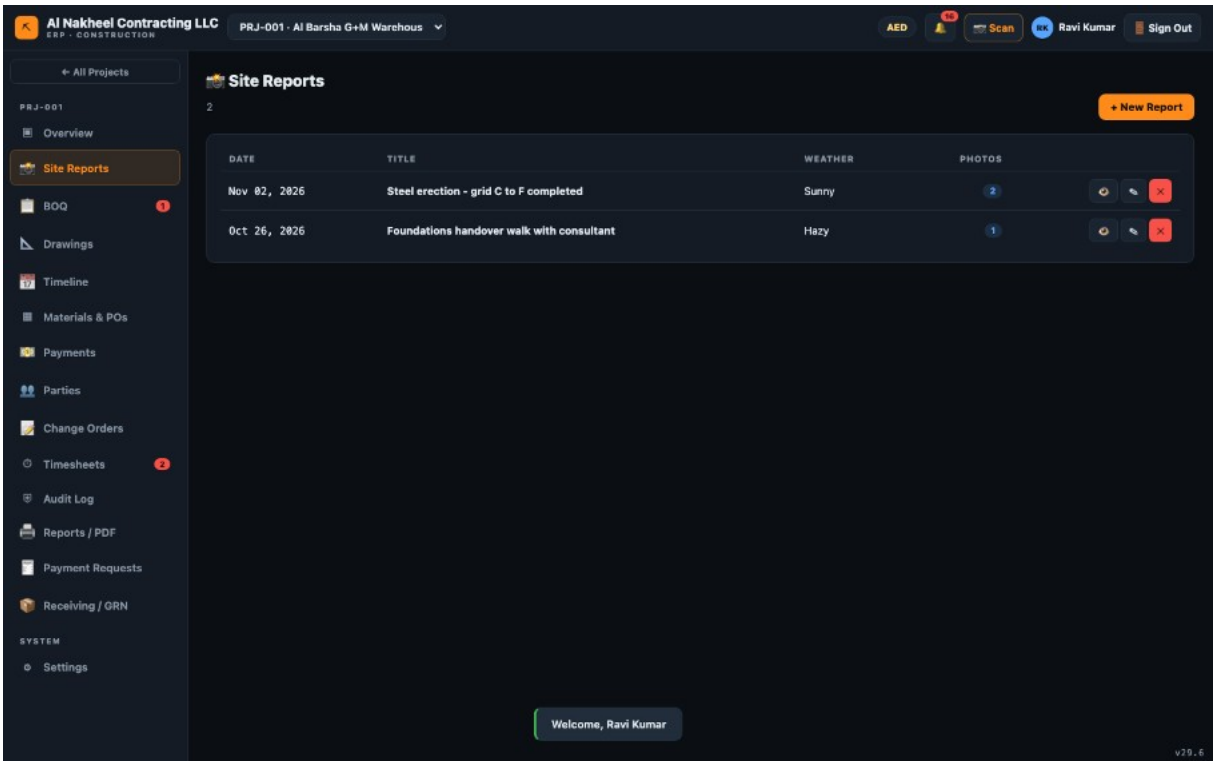

58. Choose the project from the top bar → **Overview**.

3. Log the day's work

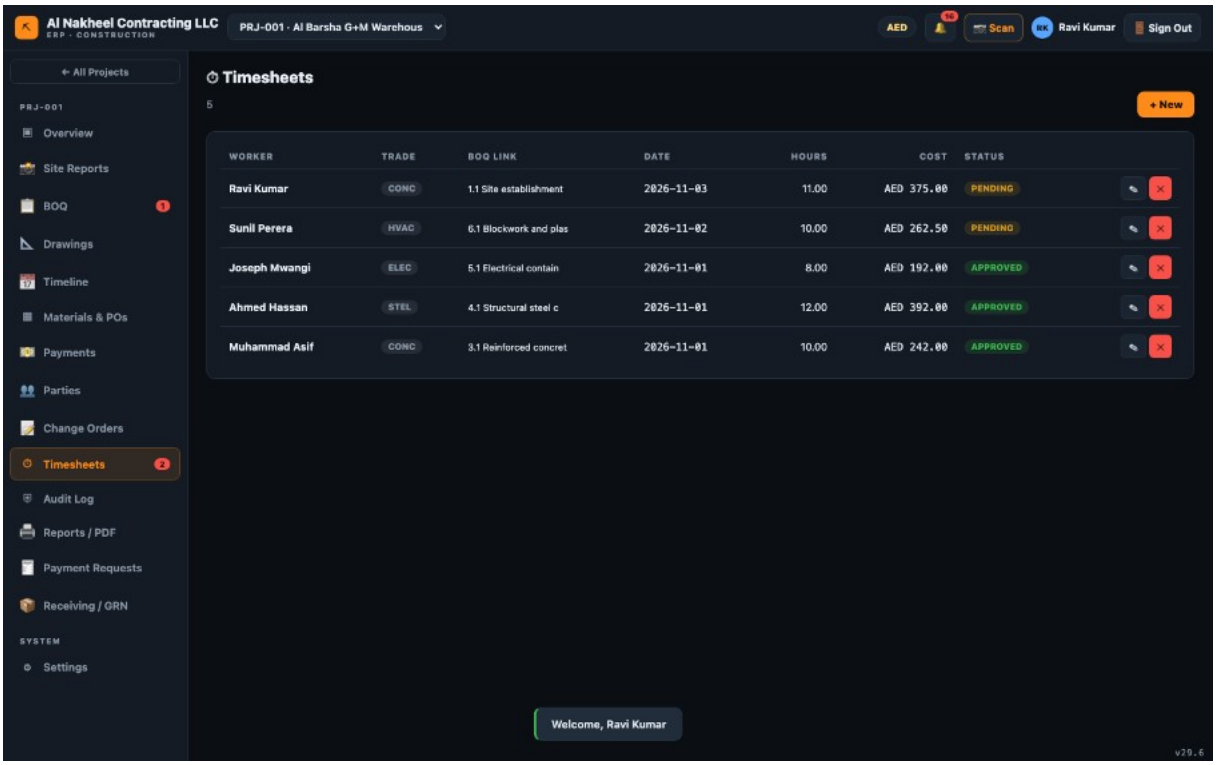

59. **Site Reports** → **+ New Report** → date, weather, workforce, activities, issues, safety, and

attach photos (they upload to cloud storage).

60. **Timesheets** → **+ New** → pick the worker (linked to the staff register), BOQ line, date,

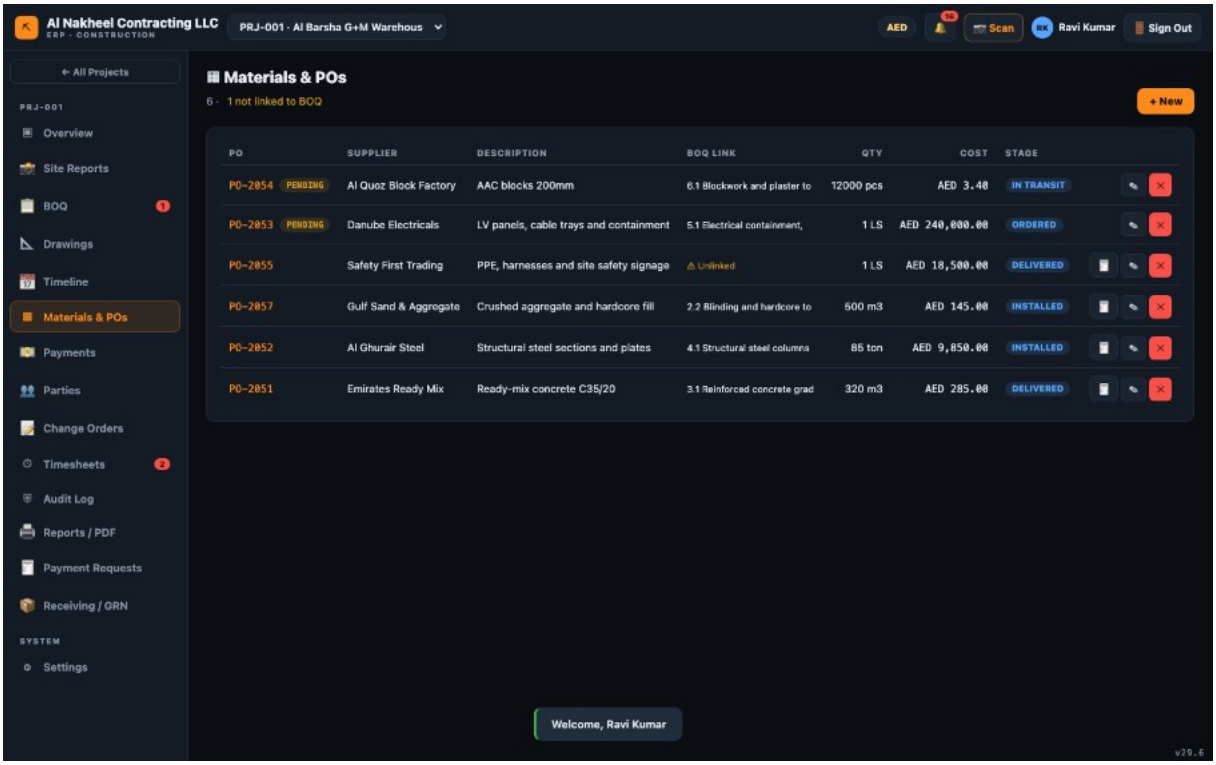

regular + OT hours. Submitting sets it to **pending** for a manager to approve.

4. Procurement & receiving

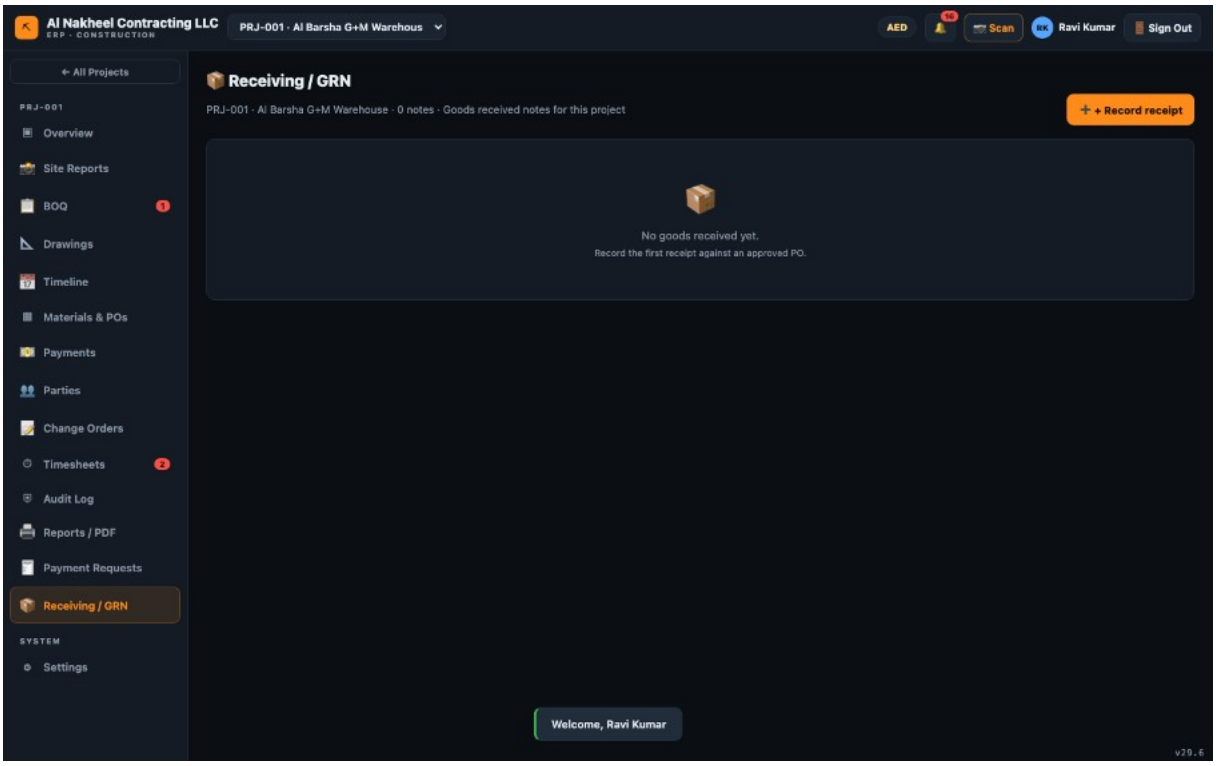

61. **Materials & POs** → **+ New** to raise a purchase order. It saves as **pending** until a manager

approves it.

62. **Receiving / GRN** → **+ Record receipt** when goods arrive (links the PO and records the quantity

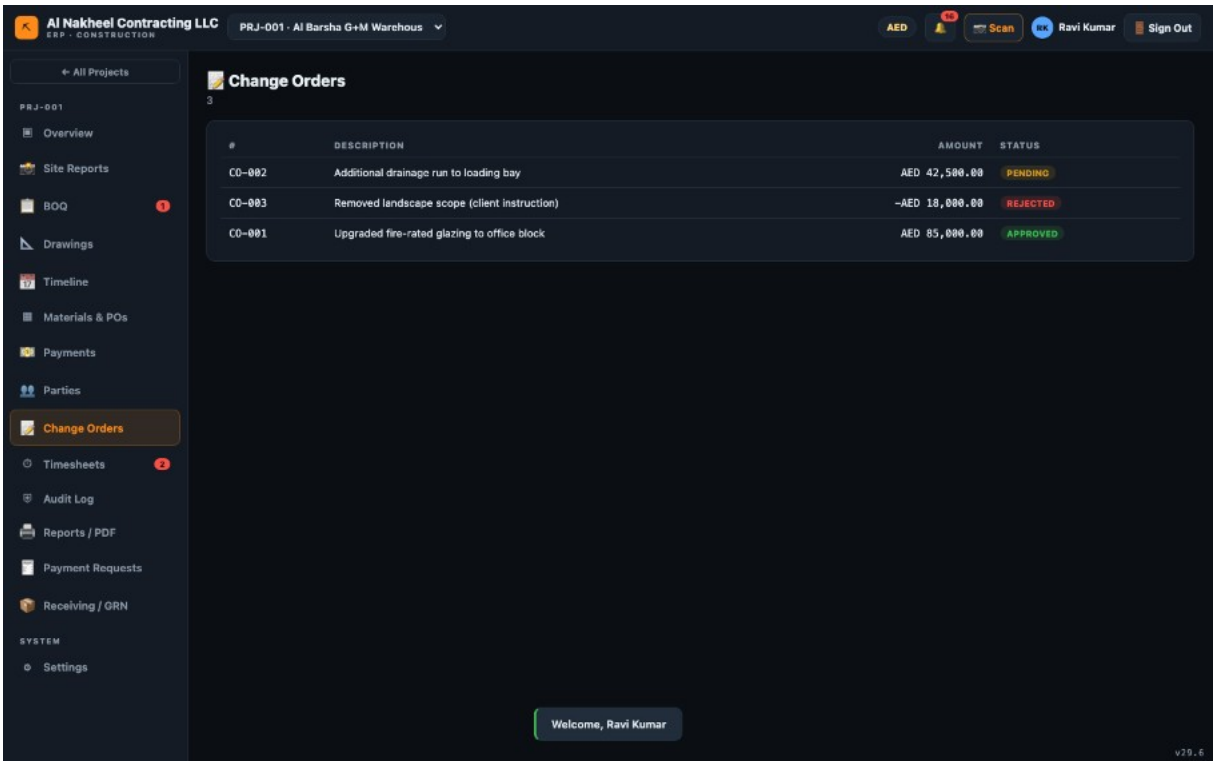

received — this is what later unblocks billing).

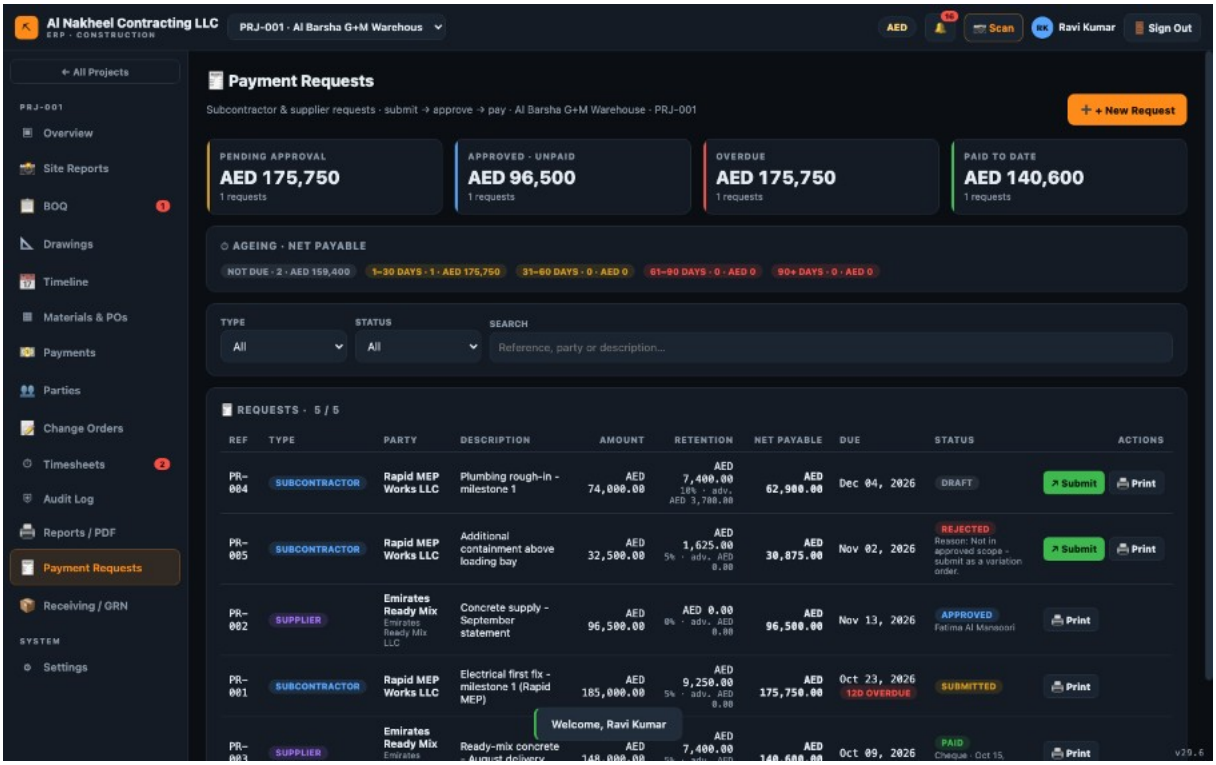

5. Variations & payment requests

63. **Change Orders** → **+ New** to raise a variation (pending until approved; approval auto-adds a

BOQ variation line).

64. **Payment Requests** → **+ New** to raise a subcontractor/supplier claim for a manager to approve.

6. Track progress

65. **BOQ** — view budget/actual/committed per line.
66. **Drawings** and **Timeline** — view drawings/revisions and the schedule.
67. **Reports** — print project reports/PDF.

7. End of day

- Submit the daily site report (with photos) before leaving.
- Confirm timesheets and any POs/COs are submitted (not left in draft).
- Check the 🔔 panel for anything you dismissed that actually needs a manager's action.

Tradesperson Lead — Day Guide

The Tradesperson Lead has the **narrowest** access: you log your own work and view the information you

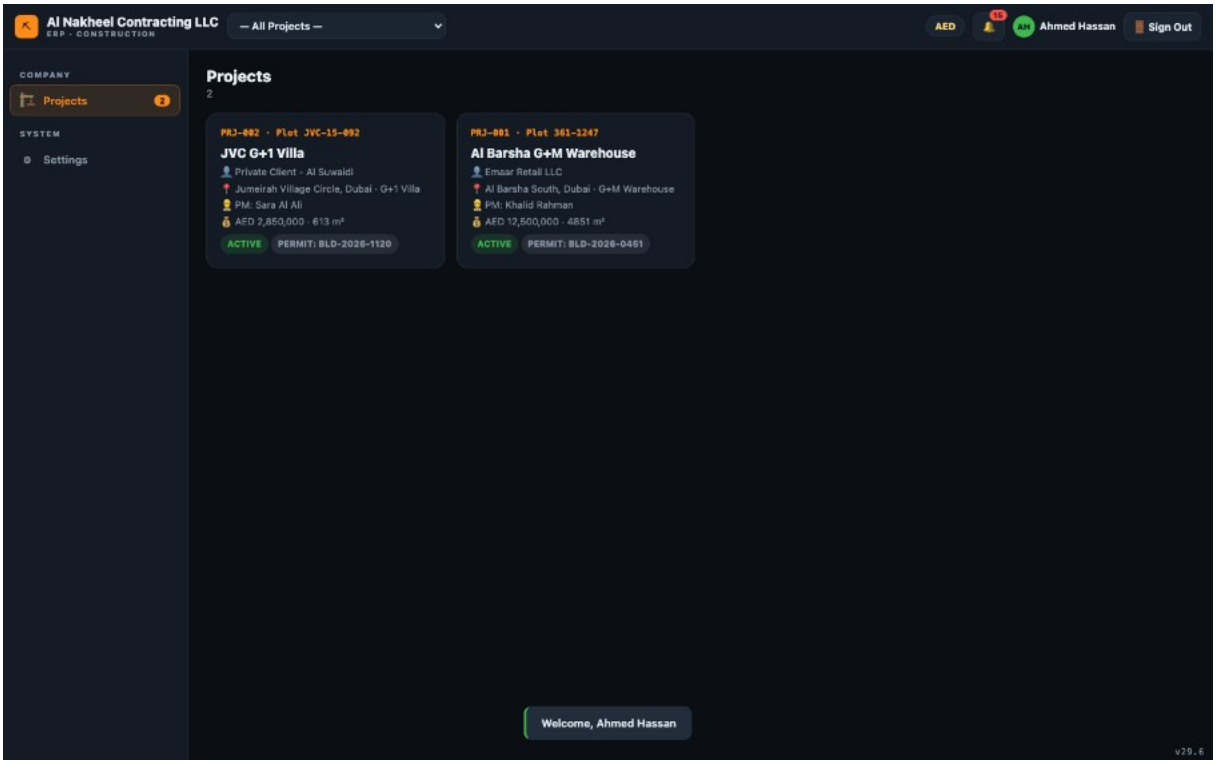

need on site. You cannot see the BOQ, approvals, finance, payroll or payment data.

You can open: Projects, and — inside a project — Overview, Drawings, Timeline, Materials/POs,

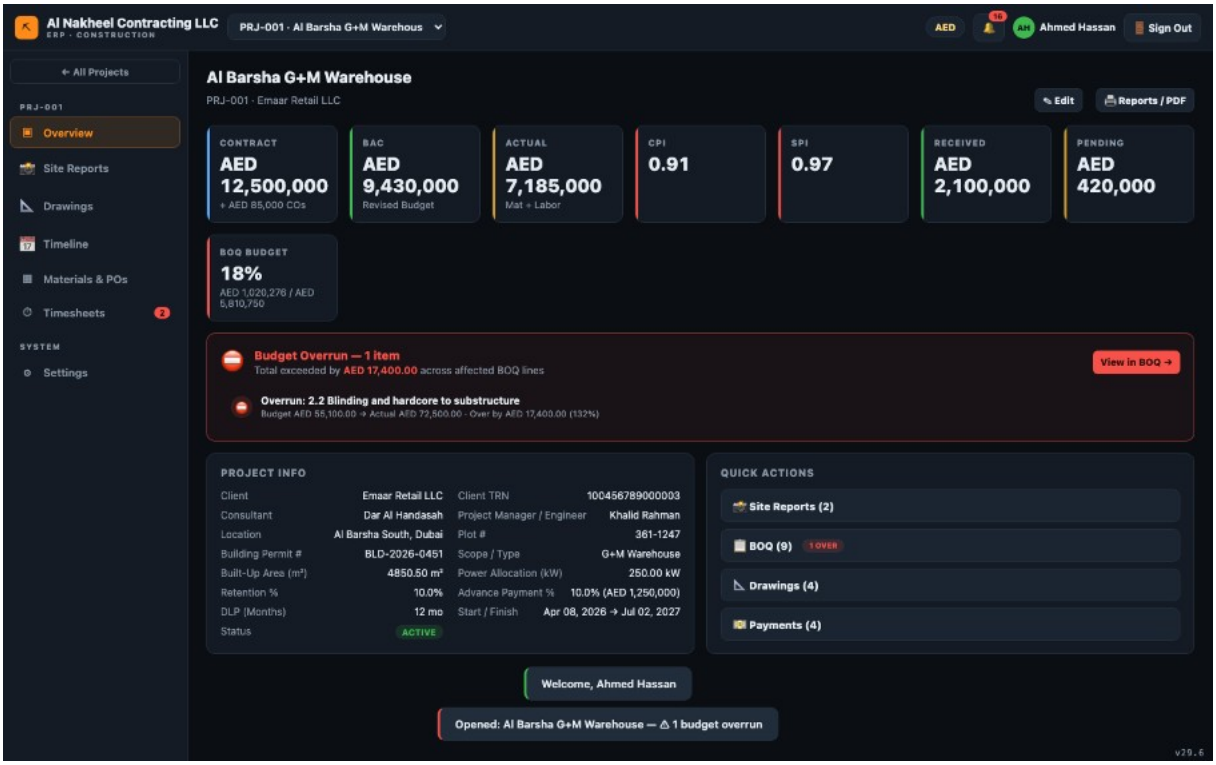

Timesheets, Settings, and Site Reports.

1. Start of day

68. Sign in → **Projects** list; pick your project from the top bar.

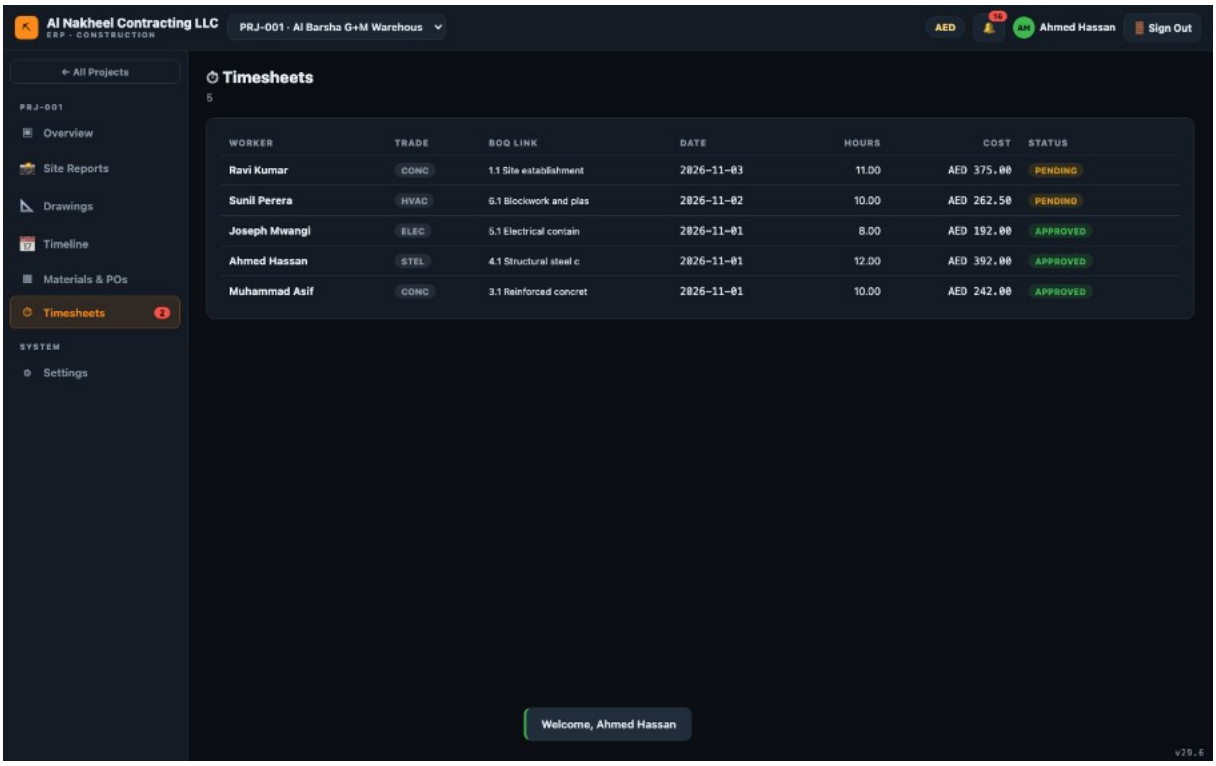

69. Open **Overview** to see the project snapshot.

2. Log your labour

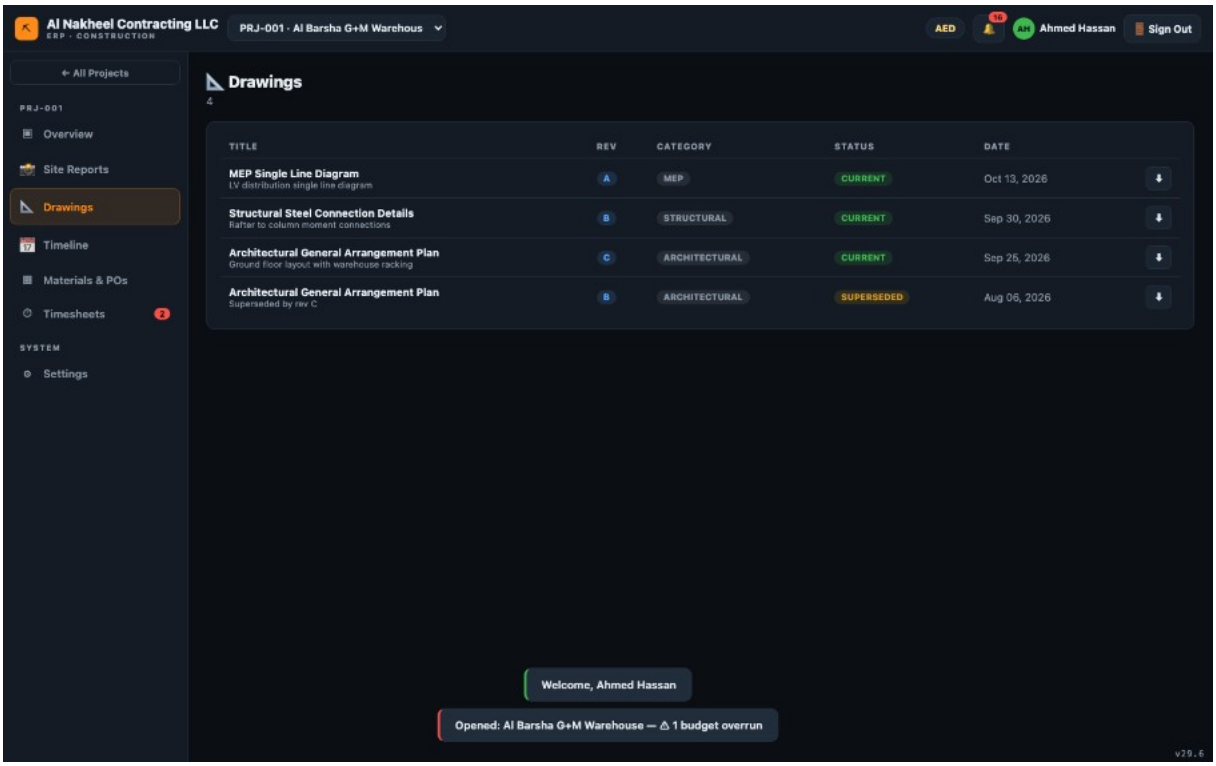

70. **Timesheets** → **+ New** → choose your name (worker select), the BOQ/activity, date, regular and

OT hours. Submitting marks it **pending** for a manager to approve.

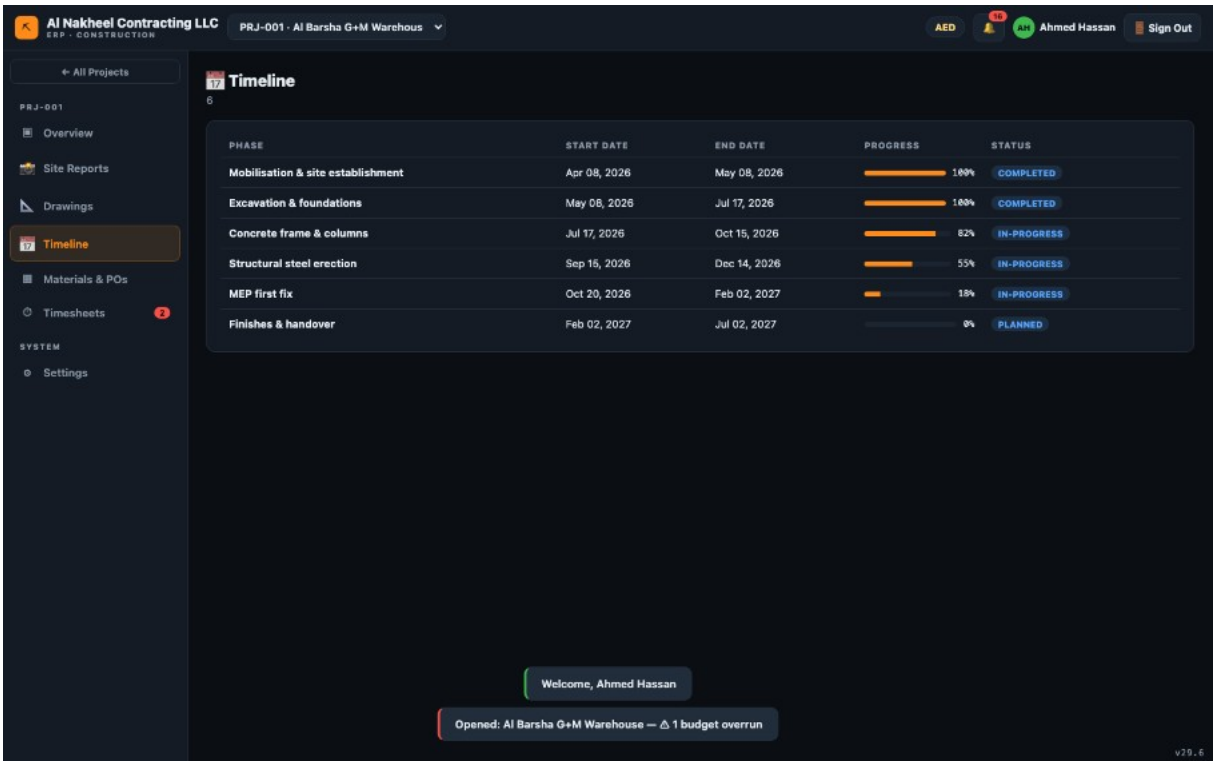

3. Check drawings & schedule

71. **Drawings** — view the latest drawings/revisions.

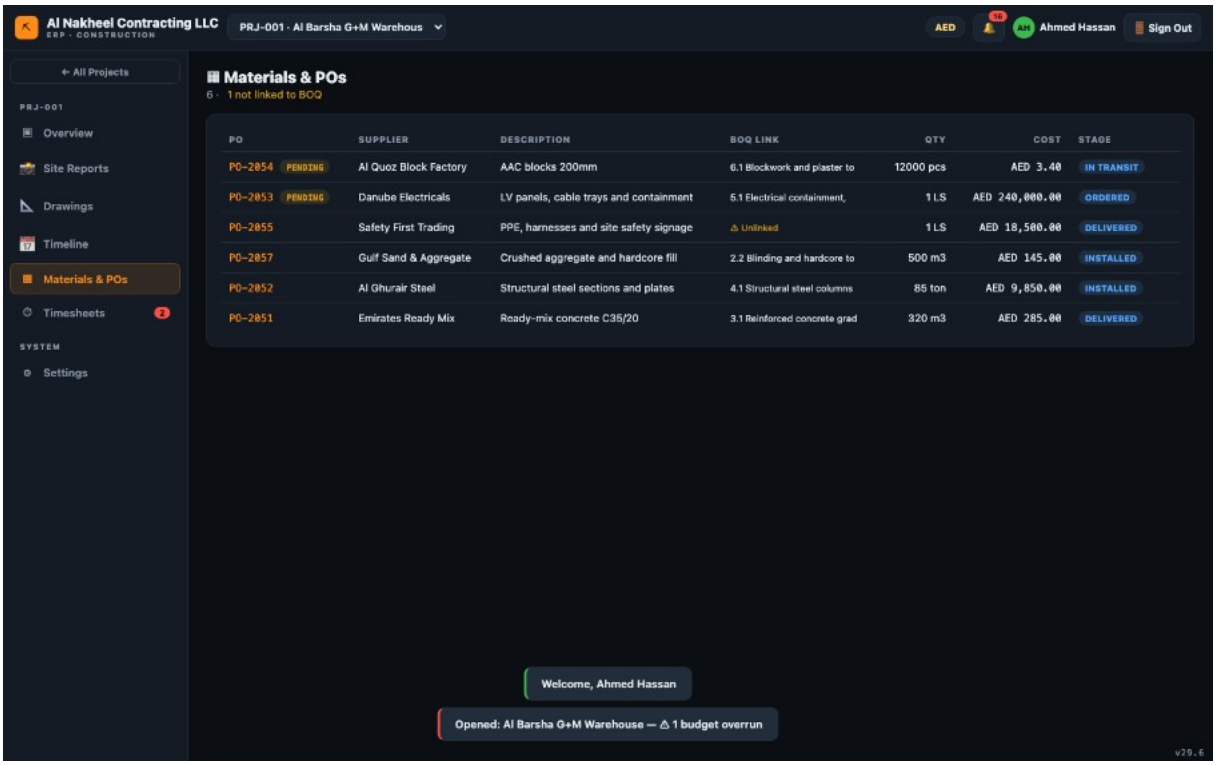

72. **Timeline** — check today's and upcoming tasks.

4. Materials

73. **Materials** — view purchase orders and their stage (Ordered / In Transit / Delivered / Installed)

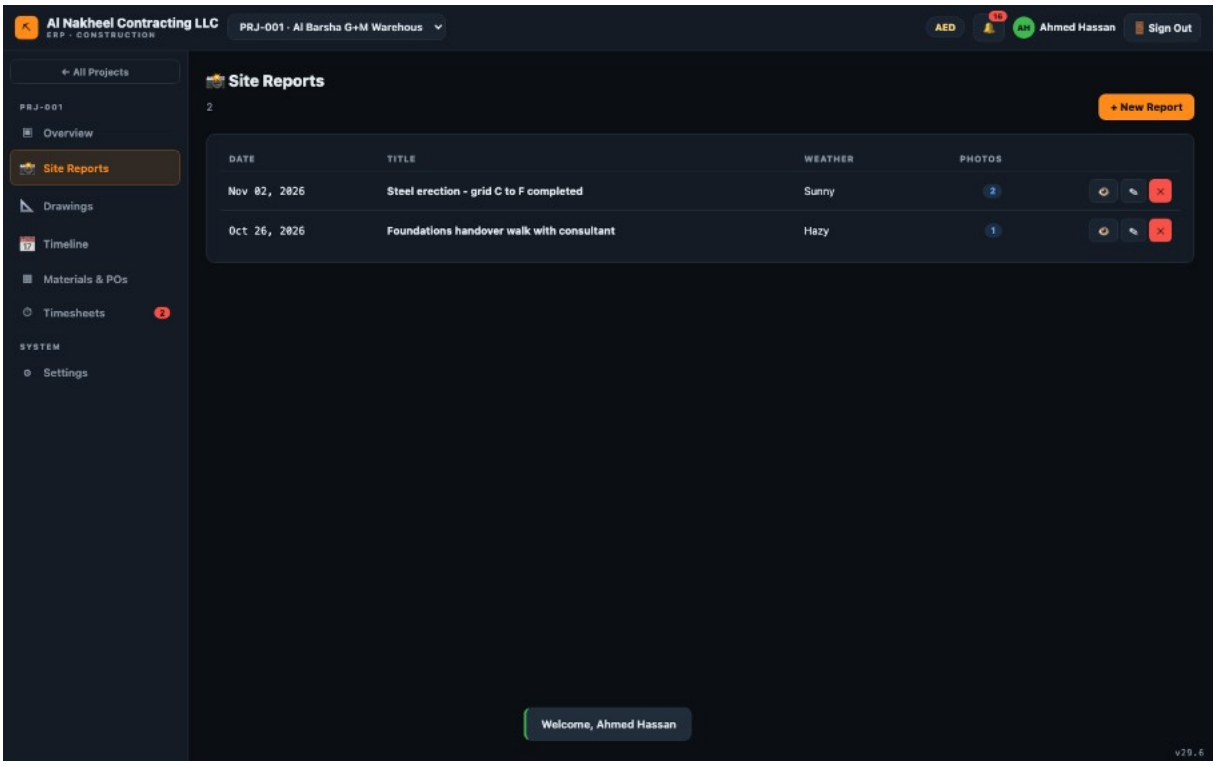

so you know what material is expected on site.

5. Site report

74. **Site Reports** → **+ New Report** — record today's activities, issues and safety notes, and

attach photos as evidence.

6. End of day

- Confirm your timesheet is submitted for the day.
- Submit the daily site report with photos.
- Note anything for tomorrow in the site report "Issues" field so the superintendent sees it.
